

St. Clare Heirloom Seeds

Specializing in Non-GMO, Non-Hybrid, Non-Treated Heirloom and Open Pollinated Vegetable, Flower, and Herb Garden Seeds

Product Catalog

More Than 500 Seed Varieties!

We do not accept orders by mail, all ordering must be done online.
This catalog is for reference only and subject to change without notice.

One of the most inspiring things in life is to enjoy the beauty of God's creations in the great outdoors. The gardener knows this joy personally. This joy one experiences in gardening is a gift from the Creator of all things in His perfect love and care for us. When we study nature or grow things in our garden we can see His handiwork. When you watch a plant grow from a seed in the perfect order given it by God, think with wonder of our God, it is amazing! All of Creation was given to us as a gift. Let us thank Him in all things! May the joy of gardening be yours this season!

Limited Seed Warranty

Our seeds are guaranteed to be true to the type and variety you purchase. We assure, through regular germination testing, that the seeds we sell meet or exceed the Federal Standards for Vegetable Seed Germination, before they leave our facilities. Our seeds are stored in a temperature controlled walk-in cooler, where they are protected from damaging heat and humidity, and treated with utmost care until they leave our facilities. Once they are shipped, environmental conditions and handling are beyond our control.

Seeds are living organisms, their viability and germination rates can be greatly affected by a number of factors, three major factors being temperature, humidity, and light. Please be aware of these factors in storage of your seeds. Proper germination of seeds and health of plants depend upon many grower related skills and practices, including, but not limited to: proper planting times, planting depth, watering, use of fertilizers, weed controls, fungicides, and insecticides; and upon growing environment and medium, including, but not limited to: soil type, diseases in soil, pests, weather conditions, and conditions in transit between our facilities and customer's home/P.O. Box, as well as environment of storage until planting time. All of these factors are beyond our control and responsibility.

Considering the above factors, and all other forces beyond our control/responsibility, we, the Seller, cannot unconditionally guarantee seeds purchased to perform properly, regardless of varying conditions of exposure, shipping, planting methods or possible Buyer error. If you experience any problem with seeds you have purchased, please feel free to write us, and we will try to assist you. In light of the many factors that can affect seeds, outside and beyond our control/responsibility, we are unable to offer a 100% Satisfaction Guaranteed Warrant. However, we will certainly do our best to arrive at a fair resolution if you find you are ever dissatisfied with our seeds/products. Please note that any resolution offered will be limited to our discretion; options may include store credit, coupon for discount on future purchases, or replacement seeds, according to individual circumstance. Thank you, God Bless, and Happy Gardening!

Privacy and Security Statement

Shopping with St. Clare Heirloom Seeds is Safe and Secure. Our website uses SSL technology and we are PCI Compliant. Checkout and payment takes place via a secure connection between your computer and a secure credit card payment processor. Our company does not store, nor do we even see your credit card information. Why Save Seeds From Your Own Garden?

Did you know that saving seeds from your own garden allows you to selectively save seeds for superior plant performance in your local conditions? By making selections each year of the best plants from your garden to save seeds from, you can effectively supply your own seed needs, over time, with seeds that will be perfect for your garden! Flavor, pest and disease resistance, early bearing, and size are among the many characteristics that can be enhanced by careful selection over a period of years.

Remember!

Only seeds from Heirloom or Open Pollinated Varieties can be saved,
Hybrids will not be true-to-type if they are replanted!

Catalog is subject to change without notice!

*Happiness is to be found only in the home where God is loved and honored,
where each one loves, and helps, and cares for the others.*

- St. Theophane Venard

Asparagus

Asparagus is a perennial that is best adapted to sandy soils in moderate climates. For best production plants prefer deeply dug, well-prepared bed, with lots of organic matter. Can start seeds indoors 2-3 months before your last frost (for best results) , or direct sow outdoors when soil has warmed. Soak seeds in warm water for 24 hrs. before planting. Plant seeds ¼" deep in sterile seeding mix. Germination should occur in 14-21 days in soil 65-80°F. Set out seedlings 10-18" apart, in full sun . Harvest will begin in 4th year when planted from seed.

Mary Washington Imp.

(*Asparagus officinalis*)

80-90 days. A very hardy and productive open-pollinated variety, producing strong, uniform, tender, medium-sized stalks. *Mary Washington Improved Asparagus* has the same great flavor as the original Mary Washington, with better yields, and tighter tops. Long cutting season. Somewhat rust-resistant. Freezes well.

Item No. AsMWI 25 Seeds per pack

UC-72 (a.k.a. Mary Washington UC-72)

(*Asparagus officinalis*)

110-120 days. Developed by the University of California-Davis, this open-pollinated variety is a Mary Washington-type asparagus. The *UC 72 Asparagus* sets heavy yields of dark green spears, a little larger than Mary Washington Asparagus, with fairly compact heads. Good disease resistance. Resistant to Fusarium Wilt and Rust. More heat and drought tolerant than other asparagus varieties. Excellent choice for home gardeners and market growers alike.

Item No. AsUC72 25 Seeds per pack

Sweet Purple

(*Asparagus officinalis*)

80-90 days. (*Asparagus officinalis*) Sweet Purple is more tender than green Asparagus with a sweet and nutty flavor in extra-large, deep purple spears. 20% higher sugar content than the green asparagus.

Item No. AsSP 25 Seeds per pack

Beans - Bush

Sow beans 1-2" deep, 2-6" apart, in rows 18-36" apart, in full sun, after danger of frost. Soaking in water 1-2 hours before planting speeds germination. Germination occurs in 4-16 days in soil 60-85°F. Provide support for pole bean varieties. For snap beans, harvest when beans are 3-6 " long. For dry beans, leave pods on plants until pods are dry, brown, and crisp, and beans are hard and rattle in pod, if more drying is needed when danger of frost has arrived, pick pods or pull entire plant and hang upside down to dry further.

Black Turtle

(a.k.a. Black Turtle Soup, Black Bean Soup, Black Mexican, Frijoles Negras, Black Spanish, Tampico Beans, Venezuelan Beans, and Mexican Blacks) (*Phaseolus vulgaris*)

85 - 105 days. **Dry Bean** Originating in Mexico and the Caribbean, the *Black Turtle Heirloom Bush Bean* is popular with rice and in soups, makes delicious refried beans, refritos, black bean dip. *Black Turtle*

Beans are a great addition to chili or baked dishes, and a favorite in Mexican, Southwestern, or "Tex-Mex" dishes, and also in Cajun or Creole cuisine. The bean that is typically known as "black beans". This bean is an important ingredient in many dishes of Latin American countries. It is the main ingredient in Moros con Cristianos in Cuba; the bean used in feijoada, the national dish of Brazil; a must have ingredient in Gallo Pinto of Costa Rica and Nicaragua and Pabellón Criollo in Venezuela. These beautiful oval shaped beans are jet black, cooking up to a rich dark brown. They can be eaten as snap or string beans when young. Stores well as a dry or soup bean. Hardy plants grow to 18-24", and are drought and heat tolerant, some Bean Beetle resistance and good disease resistance.

Item No. BbBIT 50 Seeds per pack

Blue Lake Bush 274

(*Phaseolus vulgaris*)

54-61 days. This dark green bean is a favorite for canning and freezing, a high quality bean with fine texture.

The *Blue Lake Bush 276 Heirloom Bush Bean's* small 12-22" plants set forth heavy yields of dark green, round, 5 ½-6 ½" pods, over the entire season. This variety originated from the Pole Blue Lake and was developed in 1961. Resistant to BCMV and NY15, widely adapted to varied growing conditions.

Item No. BbBLB 50 Seeds per pack

Beans - Bush (cont.)

Contender

(a.k.a. Buff Valentine, Early Contender, Contender Stringless)

(*Phaseolus vulgaris*)

40-55 days. Earlier than most beans and very productive, this popular variety was introduced in 1949. The *Contender Heirloom Bush Green Bean* is great for cool, short-season climates, but also does well in heat, well adapted to varying growing conditions. Dark green 12-20" plants set forth good yields of med-green 6-8" pods, very flavorful. High in vitamin A, B, and C. Resistant to BCMV, NY15, and GP.

Item No. BbCon 50 Seeds per pack

Great Northern

(a.k.a. Montana White, White Marrow)

(*Phaseolus vulgaris*)

65-90 days. **Dry Bean** Obtained from a Hidatsa Indian, Son of Star, by Oscar H. Will in the early 1880s, this heirloom bean seed is a long-time staple for soups and baked beans. The *Great Northern Heirloom Bush Bean's* hardy dark green 24-26" plants, set forth great yields of 4-6" pods, bearing 5-6 long white seeds, with excellent flavor and hearty texture. The fine beans are more tender and cook up faster than Navy Beans. Grows very well in the Midwest and the North. High in nutrients. Drought resistant.

Item No. BbGrN 50 Seeds per pack

Calypso

(*Phaseolus vulgaris*) 70 - 90 days. **Dry**

Bean Calypso bush bean is a good baking bean with similar texture to Yellow Eye. Plants grow to about 15" tall and have blue and white seeds that dry to black and white. 4 to 5 seeds per pod.

Item No. BbCal 50 Seeds per pack

Jacob's Cattle (a.k.a. Trout, Couch Dog, Dalmation, Anasazi, Appaloosa) (*Phaseolus vulgaris*)

80 - 100 days. **Dry Bean** A popular New England favorite with legendary Native American roots. As the tale goes the *Jacob's Cattle Bush Bean* was given by Maine's Passamaquoddy Indians as a gift to Joseph Clark, the first white child born in Lubec, Maine. Many of the nicknames are derived from the markings of these plump, kidney-type beans, white with maroon speckles and splashes. Plants grow to approx. 24", producing good yields of 4-5" pods. Delicious beans with an earthy, full flavor, boasting a slightly sweet aftertaste, holding up well to seasoning, and of fine velvety texture when cooked. Prized for use as dry beans, but also great as shelly beans when harvested earlier. Does well in cooler climates as well as hot or dry conditions. **Item No.** BbJaC 50 Seeds per pack

Holy Spirit

(a.k.a. Haricot Saint Esprit à Oeil Rouge, Holy Spirit in Red Eye, European Soldier Bean, Human, Johnson Bean)

(*Phaseolus vulgaris*) 75-100 days. **Dry Bean**

A popular New England heirloom bean dating back pre-1800s, named for its maroon markings surrounding the hilum or "eye" of the bean, resembling the Holy Spirit or an 18th century European Soldier. These tender and meaty beans are delicious for baked beans, in soups, stews, or slow cooker recipes. The *Saint Esprit à Oeil Rouge Heirloom Bush Bean's* hardy 18-36" plants produce high yields, even in the North. Excellent Flavor!

Item No. BbHoS 50 Seeds per pack

Kidney, Dark Red (*Phaseolus vulgaris*)

90-100 days. **Dry Bean** Red kidney beans originated in Peru, where Indian traders introduced them to Central and South America, and Spanish explorers later brought them back with them to Europe upon returning from voyages to the Americas. The most popular bean used in chili, the *Dark Red Kidney Bush Bean* is also commonly known as "chili

bean" for its traditional use in Chili Con Carne, or "chili" as it's called for short. Hardy, vigorous 20-24" plants set forth heavy crops of 6" pods, containing 5 maroon/mahogany colored bean seeds each. Red kidney beans are an excellent source of protein, iron, folate and fiber. Stands autumn rains well. Resistant to mold. **Caution: Do Not eat Kidney Beans raw or as sprouts. Raw Kidney Beans and Kidney Bean sprouts contain lectin, a glycoprotein that can bind to sugars in membranes, causing changes in the membrane that lead to agglutination (clumping of cells) and mitosis (cell division). In the digestive tract, they bind to intestinal cells and block absorption, causing nausea, vomiting, and diarrhea lasting about 4 hours, after ingesting as little 4 raw Kidney Beans. The Kidney Bean lectin (hemagglutinin) is destroyed by thorough boiling for 10 minutes, after which water should be discarded and replaced before cooking, whether simmering or cooking in a slow cooker/crock pot.**

Item No. BbKDR 50 Seeds per pack

Navy (a.k.a. Boston Pea, White Navy, Small White Navy, White Bean, Navy Pea Bean) (*Phaseolus vulgaris*)

85-100 days. **Dry Bean** The most widely known bean among the white bean types, the *Navy Bush Bean* takes its name from the fact that since the mid-1800s this bean has been a staple food for the U.S. Navy. Plants grow to 16-24", yield high amounts of 4-6" pods, with small, oval white beans. Smooth texture when cooked and very filling, will not mush up when cooked. A great addition to soups, baked bean recipes, and bean stews. Firm skin stands up to reheating well. Makes a delicious Ham and Bean Soup! Favorite bean for Boston Baked Beans. High in fiber and protein, a good source of folate, manganese, and Vitamin B1. Great dry bean, stores well. Some resistance to Anthracnose and Bean Mosaic Virus.

Item No. BbNav 50 Seeds per pack

Vermont Cranberry

(*Phaseolus vulgaris*) Dry Bean 75 - 98 days. **Dry Bean**

Vermont Cranberry is a popular pre-1876 New England heirloom bean that has the color and shape of a cranberry. With 5-6 seeds per pod, Vermont Cranberry has a unique sweet taste, is hardy, and easy to shell. Makes an excellent shell or dry

bean.

Item No. BbVeC 50 Seeds per pack

*No day is so bad it can't be
fixed with a nap!*

Beans - Bush (cont.)

October (*Phaseolus vulgaris*)

85 - 90 days. **Dry Bean**

A Native American bean variety which dates back to the 1830s, grown by the Cherchei Nation in Tennessee. The *October Heirloom Bush Bean* is a beautiful white bean with lovely maroon wren's egg markings. This strain comes from a Cherokee Indian descendant. A very prolific bean variety, a great staple for those long winter months! Stores well.

Item No. BbOct 50 Seeds per pack

Purple Queen (*Phaseolus vulgaris*)

52-56 days. Strong, compact, and upright 12-14" bushes produce many 5-7½" pods that are a lovely deep, glossy, purple. The *Purple*

Queen Bush Bean is known for its tender texture and rich taste. Best for eating fresh for the vitamins, and to enjoy the color. If picked young, the colorful raw pods make good eating in salads or minced into sandwich spreads for extra crunch. Taste great cooked, also, turning a brilliant dark-green. This variety is very hardy and productive. Due to its tolerance of cooler temperatures, it can be planted 2 weeks earlier than most varieties.

Item No. BbPuQ
50 Seeds per pack

Roma II

(a.k.a. Roma Bush)
(*Phaseolus vulgaris*)

50-60 days. A high yielding Italian green bean. The *Roma II Bush Bean* is tender, meaty and flavorful. Pods are wide and flat, 4½-6" long, grayish-green in color, slow to develop fiber and seeds, which gives its pods better texture, longer than other romano beans. Strong, upright 15-20" plants keep beans high off the ground, free of dirt and easy to harvest. Excellent for fresh eating, cooking, canning, and freezing. Disease Resistance: BCMV, NY 15, and rust resistant.

Item No. BbRII 50 Seeds per pack

Tendergreen Improved (a.k.a. Tendergreen Long) (*Phaseolus vulgaris*)

45-56 days. A very nice high yield and low maintenance green bean produces round, smooth, straight, meaty, dark-green, fiberless and stringless 6-7" pods, on large, upright 16-20" plants. Won the *All-American Selections* Award in 1933, and still remains a favorite multi-purpose green bean. Great for canning, freezing, fresh eating, stir-frying and pickling. Tendergreen makes the best pickled green bean as they are stingless and the pods are straight making it an easy

choice to pack into a canning jar. The seeds are lovely, purple, accented with beige markings, making them great for canning shelly beans. Heat tolerant, heat will not affect production. A long producing variety. Disease Resistance: BCMV. **Item No.** BbTgI 50 Seeds per pack

Provider

(*Phaseolus vulgaris*)

48-54 days. Very high yielding, 16-20" plants, bearing medium green, round, high quality stringless pods about 5-8" long, with purple bean seeds inside. The *Provider Bush Green Bean*, from Dr. Hoffman of South Carolina (1965), germinates well in cooler soil, and withstands adverse conditions. This early producing variety sets forth nice clusters of pods straight, widely adapted, slow to wilt, great for market growers. Great for eating fresh, freezing, or canning. Disease Resistance: BCMV, NY 15, PMV, and rust resistant.

Item No. BbPro 50 Seeds per pack

Royal Burgundy

(a.k.a. Purple Burgundy, Royal Purple Burgundy, Royal Burgundy Purple Pod, Purple Pod Bush)
(*Phaseolus vulgaris*)

50-60 days. These lovely

purple beans are an attractive addition to any garden, fun for to grow for kids and "kids at heart"! Vigorous, erect 15-20" bushes produce high yields of 5-6" round, stringless, purple pods that turn an emerald green when cooked. The *Royal Burgundy Bush Bean* is a great early producing variety, developed at the University of New Hampshire, that does well in colder soils. Delicious, great for canning, freezing, cooking or eating fresh. Bean Beetle resistant.

Item No. BbRoB 50 Seeds per pack

Top Crop

(*Phaseolus vulgaris*)

45-53 days. Widely adapted to many different climates and soil conditions, and noted for its flavor and disease resistance. The *Top Crop Heirloom Bush Green Bean* produces 5½-7" smooth, straight, stringless pods that are medium green in color. Winner of the *All-American Selections* Award in 1950. Strong and upright 18-24" plants set forth concentrated crops and high yields. Very good for canning and freezing, great fresh snap bean. Disease Resistance: PMV, BCMV, and NY 15.

Item No. BbTC 50 Seeds per pack

Pinto (*Phaseolus vulgaris*)

85-95 days. **Dry Bean** A popular bean in the Southwest and Mexican cooking. Very flavorful and smells great when cooking. *Pinto Bush*

Bean plants are half-runner type, reaching about 20", producing lots of 4½-6½" pods borne near the crown of the plants. Broad pods contain 5-6 broad, oval, light buff seeds speckled with brown. High in protein, fiber, B vitamins, calcium, phosphorus, potassium and iron. Great flavor and great nutrition all in this popular dry bean! Popular for refried beans, soups, chili, baked beans, or bean dip, and can be substituted for kidney beans or red beans in recipes.

Item No. BbPin 50 Seeds per pack

Slenderette

(a.k.a. Slankette) (*Phaseolus vulgaris*)

53-56 days. Beautiful and bountiful the two words that best describe the *Slenderette Bush Green Bean*. Vigorous, erect 14-20" plants hold pods well up off the ground protecting them from the soil. Dark green 5-6" pods are long, slender, and straight with a slight curve at the end. Pods develop fiber slowly, making this a great stringless green bean. High quality, great flavor, excellent for cooking, canning, freezing, and fresh eating! Disease resistance: BCMV, NY15, PMV, and CTV.

Item No. BbSle 50 Seeds per pack

Taylor Dwarf Horticultural

(a.k.a. October, Taylor Long Podded Dwarf Horticultural, Improved Pinto, Shelley Bean, Taylor Horticultural Improved) (*Phaseolus vulgaris*)

52-68 days. **Dry Bean** Dating back to the 1800s, the *Taylor Dwarf Horticultural Heirloom Bush Bean* is a favorite old-time bean brought to the U.S. from Italy, a true heirloom. The light green pods turn an attractive cream and red pods at maturity, producing lovely tan seeds with maroon markings. Prolific, upright plants grow to 14-18" in height, bearing numerous 5-6" pods. Does well in cool climates. Highly prized as shelly beans, pods are ready to pick for shelly beans when the red splashes appear. Also great for succotash, dry beans make a great addition to soups or chili.

Item No. BbDTH 50 Seeds per pack

Bean - Fava

Heirloom / Open Pollinated Fava beans are hardy cool season plants that can tolerate some frost but do not tolerate heat (above 70°F) well. Direct plant Heirloom / Open Pollinated Fava Bean Seeds in spring as soon as soil can be worked, 1" deep, 4-6" apart, in rows 18-30" apart, in full sun. Germination occurs in 5-10 days at 60-70°F. Thin Fava Bean plants to 8-10". In mild winter climates, Fava Beans can be fall planted for spring harvest. Harvest as Snap Beans when Fava Bean Seeds in pods are the size of a pea. For shelling beans harvest when the Fava Bean pods are thick and well-filled with seeds, while the pods are still green. For dry beans, leave pods on Fava Bean plants until pods are dry, brown, and crisp, and beans are hard and rattle in pod.

Broad Windsor (a.k.a. English Windsor Broad, Broad Pod Windsor, Horse Bean, Conqueror, Exhibition Long Pod) (*Vicia faba*)

65-75 days. Upright, strong, and tall 2-4' plants produce good yields broad, 1" wide pods, 6-8" in length filled with very large beans (often as big as a U.S. Quarter Dollar coin). The *Broad Windsor Fava Beans* have a flavor that is similar to a blend of limas and peas, but are more nutritious than limas. One of the tastiest of all dried beans. Delicious at the shelling stage, takes well to a variety of herbs and spices. The best of both worlds for those who love gardening and cooking. Pick beans at 2-3" for snap beans.

From Virginia northward, favas are planted in the spring, whereas in Gulf Coast states and warm coastal areas they may be planted from October to December for harvest in March. Cold hardy to 12° F.

Item No. BfWin 25 Seeds per pack

Bean - Lima

King of the Garden

(*Phaseolus lunatus*) 90 days. Dry Bean King of the Garden pole limas are smooth and flat with pods that are 6" to 7" long. Plants are vigorous climbers and very productive.

Item No. BIKGL 25 Seeds per pack

White Dixie Butterpea

(a.k.a. Baby Lima) (*Phaseolus lunatus*) 75 days. Shell or Dry Bean White Dixie Butterpeas are small white limas that will melt in your mouth. Pods are 5" long and have 3 to 4 beans per pod. Excellent for soups and baking. Excellent high yielding home garden variety. **Item No.** BIWDB 50 Seeds per pack

Christmas

(a.k.a. Large Speckled Calico, Giant Calico/Florida Pole, Giant Butter/Florida Speckled Giant Speckled) (*Phaseolus lunatus*)

75-100 days. An Heirloom dating back to 1840. The *Christmas Lima Heirloom Pole Bean* is a beautiful large, U.S. Quarter Dollar sized white bean with deep

red unique markings. Can be used green or dried. Rich, delicious flavor. Vigorous vines can reach 7-10', setting forth heavy yields of 4½-5½" by 1" pods, even in extreme heat.

Item No. BIChr 25 Seeds per pack

Fordhook 242 Bush (a.k.a. Mammoth Wonder Bush, Fordhook Improved, and Potato Lima)

(*Phaseolus lunatus*)

70-75 days. This popular lima bean sports broad, thick 1-1¼" wide pods, 3½-4" in length, with 3-4 large, thick, plump, oval, greenish-white seeds each, on 16-20" plants. The *Fordhook 242 Bush Heirloom Lima*

Bean is a wonderful butterbean, with a pleasing, nutty flavor. Good fresh, cooked, frozen, or dried. Won the *All-American Selections (AAS)* Award in 1945. Easy sheller. Good for the North or maritime conditions. Heat and drought resistant.

Item No. BIFhB 25 Seeds per pack

Henderson's Bush

(a.k.a. Henderson's Baby Lima, Henderson's Dwarf, and Earliest Bush Lima)
(*Phaseolus lunatus*)

60-75 days. One of the most famous lima beans, introduced in 1888 by Peter Henderson & Co. *Henderson's Bush Heirloom Lima Bean* is an excellent baby lima, smooth and with delicate, buttery flavor. Found on a Virginia roadside by a soldier returning from the Civil War, it was grown by a local market gardener and passed along to T. W. Woods & Sons, who grew it for two years and then sold the whole stock to Peter Henderson & Company in 1887. The plants are dwarf bush and can be grown like any other

bush bean, setting forth 2½-3½" long pods, bearing 3-4 small green seeds each that dry to a lovely creamy-white. Very productive, bears reliably until the first frosts hit. Great for cooking, canning, freezing, or drying. **Item No.** BIHB 50 Seeds per pack

Moral cowardice that keeps us from speaking our minds is as dangerous to this country as irresponsible talk. The right way is not always the popular and easy way. Standing for what is right when it is unpopular is a true test of moral character.

- Margaret Chase Smith

Bean - Pole

Kentucky Blue (*Phaseolus vulgaris*) 51-73 days. An old heirloom variety of pole bean that produces pods 6-8" long, on 6-8' vines. The *Kentucky Blue Heirloom Pole Bean* comes from a cross of Kentucky Wonder and Blue Lake Pole Beans, bred by Dr. Calvin Lamborn. The round, straight, smooth pods have a distinctive flavor with traces of Blue Lake's sweetness, and are very tender when cooked. The *Kentucky Blue Pole Bean* won the famous *All-American Selections*(AAS) Award in 1991! Disease Resistance: BCMV. **Item No.** BpKB 50 Seeds per pack

Missouri Wonder (*Phaseolus vulgaris*) 60 - 75 days. Missouri Wonder Heirloom Open Pollinated Pole Bean has thick round stringless pods 6 to 8" long. Missouri Wonder is very prolific and has a good beany flavor. **Item No.** BpMW 50 Seeds per pack

Kentucky Wonder (a.k.a. Old Homestead, Texas Pole, Kentucky Wonder Green Pod, Improved Kentucky Wonder, Egg Harbour, and Improved Kentucky Wonder) (*Phaseolus vulgaris*) 58-72 days. An old heirloom bean variety, originally introduced in 1864, which remains one of the most popular pole beans to this day. *Kentucky Wonder Heirloom Pole Beans* produce some of the most delicious green beans you will ever taste. Tall, hardy 5-7' vines produce clusters of large numbers of 7-10" bean pods, bright green, flavorful, and full of plump brown or white seeds. Bears freely, when picked frequently, prolific vines will keep producing right up until the first fall frosts. Formerly known as the Texas Pole Bean, given its present name by seedsman James J.H. Gregory in 1877. Perfect green bean for fresh, cooked, frozen or canned beans. Rust Resistant. **Item No.** BpKyW 50 Seeds per pack

Bean - Wax

Cherokee (a.k.a. Surecrop Stringless Wax, Bountiful Wax, Valentine Wax.) (*Phaseolus vulgaris*) 43-58 days. Believed to have been handed down from the Cherokee Indians, and introduced to the garden market in 1846. This Wax bean won the *All-American Selections* Award in 1848, and is still a great favorite today. *Cherokee*

Wax Heirloom Bush Beans are light yellow in color, stringless and delicious. Very hardy, producing well even in adverse weather conditions. Hardy, erect, 16-18" bush plants produce high yields of straight to slightly curved 5-7" oval pods. Excellent fresh, canned, or frozen. Disease Resistance: BCMV, NY15, and rust.

Item No. BwChe 50 Seeds per pack

Goldcrop (a.k.a. Golden Bountiful Wax) (*Phaseolus vulgaris*) 45-65 days. Upright Bush-type plant producing pods high up on the plant, making harvest easy. The *Goldcrop Wax Bush Bean* bears bright yellow pods, straight, round, tender, and stringless, 5-7" in length, with white seeds. From the USDA in

Washington State. Won the *All-American Selections* Award in 1974! Use for fresh, canning and freezing. Resists heat and hot weather blossom drop. Disease Resistance: BCMV and CT.

Item No. BwGoC 50 Seeds per pack

Dragons Tongue (a.k.a. Horticultural Wax, Dragon Langerie, and Merveille de Piemonte) (*Phaseolus vulgaris*) 57-65 days for Snap Beans, and 85-95 for Dry Beans. The *Dragons Tongue Heirloom Bush Bean* is a famous Dutch heirloom wax bean. This lovely bean grows to 7 1/2" long and is cream colored with purple stripes, although the purple stripes disappear after blanching. The pods are wide, crisp and

stringless. This wax bush bean can be eaten at several stages. When the greenish pods turn creamy yellow with dull purple stripes, the pods are ready to eat fresh as snap beans. As they mature, the stripes turn red, signaling the shell bean stage. When fully mature these unique heirloom beans can be used as a dry bean, as well. The plants are compact and set high yields. Remarkably good flavor! **Item No.** BwDT 50 Seeds per pack

Pencil Pod Black (a.k.a. Butterbean Wax and Eastern Black Wax) (*Phaseolus vulgaris*) 50-65 days.

Introduced in 1900, this favorite with gardeners for generations was developed from a cross between the Improved Black Wax Bean and the Black Eyed Wax Bean. The *Pencil Pod Black Wax Bush Bean* has a bush habit, with dwarf bushes reaching 14-16". Beans are a lovely yellow, slightly curved, stringless, crisp and easy to snap, growing to approximately 5 1/2-7" in length, with black bean seeds. An all-purpose old-time favorite with delicious flavor! Ideal for bean salads, cooking, canning, freezing and table use. Germinates well in cold soils and is also very resistant to heat. Resistant to rust and mosaic.

Item No. BwPPB 50 Seeds per pack

Beets

Beets are usually direct seeded. Plant beets in full sun, when soil has warmed in Spring, 1/2" deep, 1" apart, in rows 12-16" apart. Germination occurs in 5-17 days in soil 55-70°F. When the beets start to come up, thin to 3-4". Keep well watered, especially during root development. Harvest greens when young for best flavor. Harvest beet root when 1-3" across. Beets keep for a long time when stored in moist sand.

Chioggia (a.k.a. Bull's Eye or Candystripe) (*Beta vulgaris*) 50-60 days. An Italian heirloom first introduced in the late 1840s. The *Chioggia Beet* (Pronounced "key oh juh"), is named after the city Chioggia near Venice. The surrounding region, known as the Veneto is famed for it's vegetable production. This beet is a very attractive variety with it's red and white bull's eye pattern, which turn's to all pink when cooked(although it will retain its markings if baked whole and sliced just before serving), it is most commonly enjoyed raw. Mild flavored roots and smooth delicious tops make this a favorite among cooks. Matures early and also requires less cooking time than other beets, two distinguishing features of this popular beet. Does not bleed and stain! Nice for cooking and pickling. **Item No.** BeChi 250 Seeds per pack

Beets (cont.)

Bull's Blood (*Beta vulgaris*)
35 days for young leaves, 60 days for root. An Old French variety, introduced in 1840, famous for its mild and sweet flavored burgundy leaves. Harvest the leaves of the *Bull's Blood* Beet early for use in salads and soups.

Flattened round roots are tasty also, with attractive pink rings inside, best flavor when harvested somewhat young. Leaves color most striking in cool weather, and as they mature. Some heat resistance.

Item No. BeBuB 250 Seeds per pack

Golden Detroit (*Beta vulgaris*)
55-60 days.

This is an excellent dual purpose beet, a good choice for both root and greens. The *Golden Detroit Beet* root is dark orange-yellow in color, with a golden interior, turning yellow when cooked. One of the fine features of this beet is that it doesn't bleed like red beets do! The roots are very sweet and tasty, even when mature (although best when young, they will not turn fibrous as many beets do), great right out of the garden in salads, but also are wonderful pickled, boiled, steamed or stir fried. The immature tops are great in salads, and when mature have a delicious mild flavor, perfect steamed or sautéed. *For some reason golden beets can have a lower germination rate so remember to plant a few extra.

Item No. BeGoD 250 Seeds per pack

Detroit Dark Red (*Beta vulgaris*)
58 days.

The *Detroit Dark Red Beet*, an all-time favorite, has a full, round globe, uniformly deep red in color. This beet is known for its sweet flavor, and smooth texture. The tops are dark green and 12" - 15" tall, making good greens. An heirloom variety introduced in 1892. Great for eating fresh, pickling, and canning.

Item No. BeDDR 250 Seeds per pack

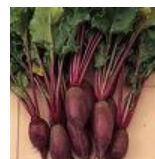

Ruby Queen (*Beta vulgaris*) 52-60 days.

A 1957 *All-American Selections* Winner, the *Ruby Queen Beet* produces exceptionally sweet dark red beets.

The canning industry's favorite for years, its smooth buttery flavor is sure to please. A very reliable variety for home gardeners and market growers alike. Performs well in poor soil and holds its shape well in crowded spaces.

Item No. BeRuQ 250 Seeds per pack

Cyindra (a.k.a. *Butter Slicer* or *Formanova*) (*Beta vulgaris*) 46-80 days

This uniquely shaped beet is long and narrow, making it easy to peel and produces more uniform slices than your typical round beet. The *Cyindra Beet* is well suited to gardens with little space or for those who pack a large number of varieties into their garden, with growth being down instead of out. Highly productive variety. Root is sweet and tender, smooth and ringless. Greens are small, reddish green, and edible. Great for canning, pickling, and eating.

Item No. BeCLR 250 Seeds per pack

Early Wonder Tall

Top (*Beta vulgaris*) 55 days.

The *Early Wonder Tall Top Beet* is an old heirloom that predates 1811. It has a slightly flattened globular root that is dark red, with bunching tall greens 12" - 15" tall, glossy leaves make choice greens. Adapts well to all seasons, is good for early spring plantings. A good all-around beet! **Item No.** BeEWT 250 Seeds per pack

Broccoli

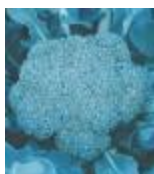

Broccoli lacks tolerance to extreme heat. Direct seed in spring or start indoors 4-6 wks before last frost. Plant seeds 1/2" deep in full sun, 4-6" apart, in rows 18-36" apart, when outdoor temperatures have reached 50°F. Germination usually occurs in 5-17 days in soil 55-75°F. Plants should be thinned to 12-24". Harvest center head before flower buds open, then harvest side shoots frequently for continuous production.

Green Sprouting Calabrese (a.k.a. *Early Italian Green Sprouting*) (*Brassica oleracea*)
58-90 days from transplant.

This broccoli variety was brought to America from Italy in the late 1800s.

Green Sprouting Calabrese Broccoli is a true mainstay with gardeners. Heads grow to 5-8", with a central head, bearing many side shoots. Does well in cool climates, extremely frost tolerant. Will continue to grow side shoots throughout season, even after main head is cut. Very flavorful, and rich in vitamins. **Item No.** BRGSC 50 Seeds per pack

DeCicco (*Brassica oleracea*)
48-85 days from transplant.

DeCicco Heirloom Open Pollinated Broccoli is an old reliable favorite from Europe. DeCicco has a compact 2-3ft plant that produces 3" to 4" bluish green heads. After the head is cut it will produce lots of medium sized heads from side shoots. DeCicco Broccoli is non uniform in maturity that will give the home gardener a nice crop over an extended period of time. DeCicco Broccoli Freezes well. **Item No.** BrDeC 50 Seeds per pack

Purple Sprouting

(*Brassica oleracea*) 220 days from transplant. Purple Sprouting Heirloom Open Pollinated Broccoli is an English variety bred for overwintering. If given some frost protection (Coldframe) Purple Sprouting Broccoli will even produce in the midwest.

Plant in early fall for next spring crop. Purple Sprouting Broccoli plants are 24 to 36" tall, bushy, and with lots of purple flowers. **Item No.** BrPuS 50 Seeds per pack

Waltham 29 (a.k.a. *Early Green Waltham 29*) (*Brassica oleracea*)
74 days from

transplant. Plants develop to mature in cold weather, bred to withstand the increasing cold of fall maturity. *Waltham 29 Broccoli* will continue to sprout lateral buds for 6-8 weeks after cutting main head. Great variety for freezing. Bred by University of Massachusetts, Waltham Field Station, Waltham, MA around 1950. Drought tolerant, widely adapted.

Item No. BrW29 50 Seeds per pack

Brussels Sprouts

Heirloom / Open Pollinated Brussels sprouts prefer cooler climates, but can be grown in hot climates by direct seeding in mid-summer for a late fall/winter harvest. Start Brussels sprouts indoors 4-6 wks before last frost, or direct sow mid-May to mid-June. Set out or plant in full sun to partial shade. Plant Heirloom Brussels sprouts seeds $\frac{1}{4}$ - $\frac{1}{2}$ " deep, 4-6" apart, in rows 18-36" apart. Germination occurs in 5-17 days in soil 55-70°F. Thin plants to 12-24" apart. For best flavor and tenderness, harvest after plants have endured a couple of frosts.

Long Island Improved (a.k.a. Paris Market, Half Dwarf Improved, and Long Island Improved Catskill Strain)

Brassica oleracea 85-115 days Introduced around 1890, this old a variety still holds its popularity with gardeners. Sometimes mistaken for the variety "Catskill", introduced in 1941, the two are similar but not the same variety. *Long Island Improved Brussels Sprouts* are semi-dwarf plants, producing many closely set, tight, firm, dark green, 1-1½" sprouts on a 20-24" stem. Freezes well. They taste great roasted with other vegetables, hearty meat or sausage. Also, nice chopped up fine and used in salads or coleslaw.

Item No. BSLII 50 Seeds per pack

Cabbage

Heirloom / Open Pollinated Cabbages are a hardy, biennial, cool season crop, growing best where the summers are mild. Early maturing heirloom cabbage varieties are planted in the spring, and longer season heirloom varieties are usually planted in summer for a fall harvest. Start spring cabbage varieties indoors 6-8 wks before last frost or direct seed in full sun. Plant seeds $\frac{1}{4}$ - $\frac{1}{2}$ " deep, 4-6" apart, in rows 2-3' apart. Germination usually occurs in 5-17 days in soil 55-75°F. Thin heirloom cabbage plants to or set out transplants 15-24" apart. Harvest early cabbage varieties promptly to avoid bursting, later types will hold in the field longer. At harvest, keep 2-3 wrapper leaves to protect heirloom cabbage heads from bruising.

Early Jersey Wakefield

(Brassica oleracea)

60-75 days. Introduced in the U.S. by Francis Brill, of New Jersey, in the year

1840. Originally grown by said gentleman and neighbors, the *Early Jersey Wakefield Cabbage* developed from a natural cross between the variety "Wakefield", from England, and the other cabbage varieties growing in the neighborhood. Officially introduced to the public in the 1850s, by the well known Peter Henderson. This variety is one of the earliest and best cabbages, and known to be very reliable and easy to grow. Heads are conical in shape, solid and tightly folded, 7" in diameter and 10-12" long, weighing 2-4 lbs, set on short stems. Tender, with fine flavor, the leaves are great wrappers for cabbage roll recipes, also great fresh!

Item No. CaEJW
100 Seeds per pack

Copenhagen Market

(Brassica oleracea)

60-100 days. Introduced in 1909 by Hjalmar Hartmann & Co. of Copenhagen, Denmark. One of the largest early maturing ball-head type cabbages.

The *Copenhagen Market Cabbage* produces heavy yields of 3-4 lb heads, which are resistant to bursting. Very hardy, and adapts well to a variety of climates. This variety's compact growth lends well to small garden spaces. Attractive, blue-green heads are high quality, the standard for commercial cabbages developed since its introduction to the market.

Item No. CaCM 100 Seeds per pack

Golden Acre

(Brassica oleracea)

62-65 days. Produces very flavorful, tight, round heads, 6-7" across, on compact plants, approx 1 ft. tall. The *Golden Acre Cabbage* is an easy to grow variety and works especially well for the small garden where space is limited. Heads are medium green with a white interior. A great cabbage for coleslaw or stir fry. Good disease resistance.

Item No. CaGoA
100 Seeds per pack

Danish Ballhead

(a.k.a. Amager)

(Brassica oleracea)

90-110 days. An old-time favorite, it has been the standard storing variety since introduced by W. Atlee Burpee in 1887. The *Danish Ballhead Cabbage* produces round, blue-green, 7-8" heads, weighing 5-7 pounds, with a mild and tender interior. A short stemmed strain of the Danish variety, "Amager", dating back to the 15th century. Adapted to the Northeast, and does well in mountainous areas. Great all-purpose cabbage. Delicious fresh in salads. Excellent keeper. One of the very best for kraut.

Item No. CaDaB 100 Seeds per pack

Late Flat Dutch

(Brassica oleracea)

95-110 days. One of the largest cabbages with solid oval heads growing to 7" deep by 12" in diameter, and weighing in at 10-15 lbs. The *Late Flat Dutch Cabbage* stores very well, and is the standard for late season varieties. Heads have a short core and excellent wrapper leaves. Will sometimes do poorly in hot weather, but revives nicely when cool, wet weather returns. Suitable for spring, summer, and fall crops. Very cold hardy.

Item No. CaLFD
100 Seeds per pack

Cabbage (cont.)

Early Round Dutch

(*Brassica oleracea*)

75 days. A good variety well suited for early market. Ball shaped, 4 - 5 pound heads have crinkled, dark blue - green cup shaped

leaves. **Item No.** CaERD
100 Seeds per pack

Red Acre

(*Brassica oleracea*)

75 days. One of the best red cabbages available. Produces lovely, reddish-purple, globe shaped heads. The *Red Acre Cabbage* is great fresh, cooked, or in coleslaw, adds a wonderful touch to any meal. Very resistant to cabbage yellowing. Well suited for small gardens, as it stays more compact than many cabbage varieties. Stores very well, and will last a long time in the garden without splitting or bursting.

Item No. CaRA
100 Seeds per pack

Mammoth Red Rock

(*Brassica oleracea*)

90-100 days. Introduced in 1889, this exceptional variety of red cabbage produces solid round heads 8" in diameter and weighing 7-8 lbs. The *Mammoth Rock Cabbage* is red throughout, uniform, medium to small cored, and has fine flavor. High in Vitamin C and is great cooked, fresh in salads, or for pickling.

Item No. CaMRR
100 Seeds per pack

Cabbage, Savoy

Savoy Perfection (*Brassica oleracea*)

90-92 days. A large drumhead-type cabbage that has finely-wrinkled, savoyed leaves, mild and sweet in flavor. The *Savoy Perfection Cabbage* is finer than most cabbages, being sweeter, with a delicate flavor. Savoy Perfection also does not give off the sulfur smell when cooking, like other cabbage varieties. Heads weigh 6-8 lbs. Great for stuffing, steaming, stir fry, and is the key ingredient in Italian minestrone soup. Unique and beautiful cabbage, fun to grow!

Item No. CaSaP 100 Seeds per pack - \$2.00

Cabbage, Chinese

Michihili (*Brassica rapa*)

70-85 days. A heading Chinese cabbage, producing cylindrical heads that are upright, 4" in diameter and 14-24" in height. The *Michihili Chinese Cabbage* is a very popular variety, the most commonly grown Chinese cabbage in America. Grows best in mild climates. Excellent in stir fry, coleslaw, salads or added to your favorite Asian dish. Especially good

are the tender hearts, chop them up and add them to your salad, or boil them(not to long) and put butter on them!

Item No. CaCMi 100 Seeds per pack

Pak Choi, White Stem (a.k.a. Bok Choy)

(*Brassica rapa*)

45-50 days. A non-heading leaf type Chinese cabbage that produces large, nearly round, smooth, glossy green leaves with snow white stalks. *Pak Choi White Stem Cabbage* is crisp and mild tasting, a popular green in Asian cooking. It is a main ingredient in Chow Mien. Very cold hardy. To avoid bolting, plant later in cool areas.

Item No. CaWSPC 100 Seeds per pack

Cantaloupe

Heirloom / Open Pollinated Cantaloupe are heat loving plants that prefer well drained loose soil and an even amount of water. Plant Cantaloupe in rows or hills but make sure the soil is well warmed. In the North it helps to start seeds indoors 2-3 wks. before last frost. Plant Cantaloupe seeds ½" deep in full sun. For rows plant 3-4" apart, in rows 6-10' apart. For hills plant 4-6 seeds per hill, with hills 2-3' apart. Germination occurs in 3-10 days in soil 70-85°F. In hills thin to 2 Cantaloupe plants per hill. Harvest when fruit easily slips from the vine, or smells very sweet and fragrant at the blossom end. Heirloom Honeydew does not slip from the vine, the melon must be cut from the vine.

Casaba Golden Beauty

(*Cucumis melo*)

104 days. Casaba Golden Beauty Heirloom Open Pollinated Melon is an old heirloom that dates back to the 1920's. It has a tough wrinkled rind that matures to a golden color. Casaba Golden Beauty melon has 7 to 8 lb fruit that has very aromatic white flesh. Is crown blight resistance and is an excellent shipper that keeps for months. Adapts well to hot dry climates.

Item No. CICGB 25 Seeds per pack

Crenshaw (*Cucumis melo*)

105-115 days. A melon that will please the whole family with it's deliciously sweet flavor and ultra smooth texture, perfect for those who don't like the grainy texture of most melons. The *Crenshaw Melon* produces large 8-10 lb. fruits, green skinned, turning to yellow-green at maturity, with a lovely salmon colored flesh. Very vigorous vines. A heat loving melon, best suited to warmer climates. Peak season for Crenshaw melons is August through September, with the fruit season beginning in July and ending in October.

Item No. CICre 25 Seeds per pack

Cantaloupe (cont.)

Crenshaw (*Cucumis melo*) 105-115 days. A melon that will please the whole family with its deliciously sweet flavor and ultra smooth texture, perfect for those who don't like the grainy texture of

most melons. The *Crenshaw Melon* produces large 8-10 lb. fruits, green skinned, turning to yellow-green at maturity, with a lovely salmon colored flesh. Very vigorous vines. A heat loving melon, best suited to warmer climates. Peak season for Crenshaw melons is August through September, with the fruit season beginning in July and ending in October.

Item No. C1Cre

25 Seeds per pack

Honeydew, Green

Flesh (Honeydew)

(*Cucumis melo*)

105-115 days. The high sugar content of this melon makes it one of the sweetest melons around. The *Green*

Flesh Honeydew Melon is a beautiful melon with a smooth creamy white rind, and lime green interior flesh. Melons grow to 7-9" long and 5-6" wide, weighing 3-6 lbs. Best suited to the South or Southwest, but with some TLC and southern exposure can be grown elsewhere. Stores and ships well.

Item No. CIHDG

25 Seeds per pack

Iroquois (Iroquois Extra Select, Giant Early Wonder)

(*Cucumis melo*)

75-90 days. This attractive, early-maturing melon is perfect for market gardeners. With its heavy netting on

deeply ribbed gray-green skin, the *Iroquois Cantaloupe* is not only delicious, but also beautiful on display! Rind is tough, holding up to bumps and jostling more, perfect for transport to Farmer's Market, or the busy gardener's fast paced harvest. Melons grow to 6-7" in diameter and weigh in at 5-7 lbs. Fusarium Wilt resistant. Does well in Mid-western and northeastern US and eastern Canada. **Item No.** CIIro

25 Seeds per pack

Rocky Ford

(*Cucumis melo*) 85 days.

Rocky Ford Heirloom Open Pollinated Melon is an heirloom that goes back to 1881. Rocky Ford produces not

quite round 2-3lb fruit with deep grained green flesh. Plants are prolific producers, very rust resistant, with good vigor.

Item No. C1RoF 25 Seeds per pack

Hales Best Jumbo (Hale's Best Original, Hales Best Jumbo #936, Hales Jumbo)

(*Cucumis melo*)

85 days. A true favorite that old timers swear by.

Hale's Best Jumbo Melon is a

great early cantaloupe, with very thick sweet flesh, and a small seed cavity, giving you the most melon for your money and your work!

The exterior is heavily netted, and the salmon colored interior flesh is rich in flavor. Introduced over 80 years ago this cantaloupe has truly stood the test of time with prolific vines producing large 3-5 lbs. melons. Drought resistant, does well in many growing conditions.

Item No. CIHBJ

25 Seeds per pack

Honeydew, Orange

Flesh (Honeydew)

(*Cucumis melo*)

90-110 days. Orange Flesh Heirloom Open Pollinated Honeydew has creamy white skin when ripe and thick light

orange flesh. Excellent flavor that is between Honeydew and Crenshaw with ripe melons averaging 6.5" diameter and 5 lbs weight.

Item No. CIHDO

25 Seeds per pack

Minnesota Midget

(*Cucumis melo*)

60-75 days. Bred by the University of Minnesota in 1948 specifically for shorter growing seasons in the northern regions. The *Min-*

nesota Midget Melon is an extra early variety, with compact vines perfectly suited to the small garden, some have even reported them to do well in large containers. Small fruits are approx. 5-6" in diameter, and weigh 13 oz - 1 1/2 lbs. Thick golden-yellow interior flesh is delicious and sweet, edible to the rind. Tolerant to Fusarium wilt and cool nights. **Item No.** CIMiM

25 Seeds per pack

Hearts Of Gold

(*Cucumis melo*)

70 days. Hearts Of Gold

Heirloom Open Pollinated

Cantaloupe dating from

1895 has stood the test of

time. Hearts Of Gold pro-

duces heavily netted fruit with medium

ribbing. Flesh is sweet, deep orange, very

thick and firm. Vines are vigorous, very

productive, and resistance to blight.

Item No. CIHOG

25 Seeds per pack

Honey Rock (Sugar Rock)

(*Cucumis melo*)

80-88 days. An old-

fashioned favorite, 1933

winner of the *All-American*

Selections Award, holding

its popularity with garden-

ers to this day. The *Honey Rock Cantaloupe*

produces 5-7 fruits, 6" in diameter, weigh-

ing 2-3 lbs. Melons are coarsely netted on

the gray-green rind, with a very sweet salm-

on orange interior. *Honey Rock* is said to be

a result of a cross between 'Champlain',

'Irondequoit' and 'Honey Dew' and was

introduced by Watt Richardson of Ohio in

about 1920. Vines are vigorous and Fusari-

um Wilt resistant.

Item No. CIHoR

25 Seeds per pack

Jenny Lind

(*Cucumis melo*)

70-85 days. Jenny Lind

Heirloom Open Pollinated

Cantaloupe is an old heir-

loom that is making a come-

back by popular demand.

Vines are 5 ft long with flat 1 to 3 lb fruit

with knobs or turbans on the blossom end.

Flesh is limegreen, very sweet, and aro-

matic. Jenny Lind matures mid season and

was known in the Philadelphia area before

1840.

Item No. CIJeL

25 Seeds per pack

Associate with men of good quality if you esteem your own reputation; for it is better to be alone than in bad company. -George Washington

Carrots

Heirloom / Open Pollinated Carrots grow best in well prepared, deeply worked, loose soil. Direct seed Carrots in full sun or part shade (in hot climates), from early spring-summer, $\frac{1}{4}$ - $\frac{1}{2}$ " deep, approx. 4 seeds per inch, in rows 12-16" apart. Germination occurs in 6-21 days at temperatures of 50-75° F. Thin the plants to 1-3" apart. To prevent green shoulders you can hill 1-2" of soil around plants when 7-10 leaves have formed. A good mulch of organic material (such as grass clippings) is very beneficial once carrots are established. Harvest when Heirloom / Open Pollinated carrots have brightened in color, when color has deepened.

Atomic Red

(*Daucus carota*)

65-75 days. These neat red carrots are high in lycopene, the antioxidant credited with preventing several types of cancer. In fact they become even more beneficial when cooked, as the process makes the lycopene more available for your body to use. The *Atomic Red Carrot* bears tapered red roots, up to 10" long, a sweet and delicious carrot. Try them fresh in salads to add color, or cooked, as cooking brings intensifies the lovely red color of these unique carrots. Kids of all ages will love them! Try something different and healthy this year.

Item No. CtAtR
250 Seeds per pack

Chantenay, Red Core (a.k.a. Chantenay Half Long Red Core, Supreme Long, Burpee's Goldinhardt, Chantenay Red Cored Supreme)

(*Daucus carota*)

65-75 days. Originally introduced in France in the 1830s, this large, stump-rooted carrot is an enduring favorite in the garden and the kitchen alike. The *Red Core Chantenay Carrot* produces stocky 5-5 ½" inch long, tender, sweet, and bright orange roots, with a deep red-orange core. Adaptable to clay and a wide range of soils. A good split resistant variety. One of the sweetest carrots, great for juicing and fresh eating.

Item No. CtCha
250 Seeds per pack

Cosmic Purple

(*Daucus carota*)

60-70 days. This gorgeous and unique carrot is another variety high in antioxidants, including anthocyanin and lycopene, also high in Vitamin A. The *Cosmic Purple Carrot* has an imperator shape, bearing deep purple skin with a orange or yellow interior, kids love their unique colors, and they are right up the alley of those enjoy planting unique vegetable varieties. *Cosmic Purples* grow to about 6-8" with strong 18" tops. A sweet and delicious carrot with the highest nutritional value, a great combination!

Item No. CtCoP
250 Seeds per pack

Danvers 126 (a.k.a. Half Long, Danvers Red Core #126) (*Daucus carota*)

65-87 days. *Danvers carrots* are conical shaped, with well-defined shoulders, tapering to a point at the tip. They

do well in clay or heavy soils, with high yields. The *Danvers 126 Carrot* is heat tolerant. Grows 7-8" long, with large, sturdy tops that aid in harvesting. This variety was developed by the Eastern States Farmers Exchange, West Springfield, Massachusetts from other strains of Danvers which were known for heat resistance. The Danvers 126 has dark bright-orange flesh, which is smooth, sweet, and tender. Stores well. A popular choice for home and market.

Item No. CtDnvr
250 Seeds per pack

Imperator 58 (a.k.a. Long Imperator 58) (*Daucus carota*)

75 days. The Imperator carrot is longer and thinner than other varieties of carrot. Does best in loose soils. The

Imperator 58 Carrot is well suited for all uses, with excellent flavor. Grows to 9" long, with smooth, fine-grained, deep- orange flesh.

Item No. CtImp
250 Seeds per pack

Minicor (a.k.a. Amsterdam or Baby Nantes)

(*Daucus carota*)

54-60 days. An early maturing gourmet baby carrot, originating in Holland. The *Minicor Carrot* is the number one variety for high quality baby carrots. The roots are sweet and tender, fine-grained, deep orange, and uniform in size and shape, growing to 3-4" long, or 6-7" long when grown to full size. Has won many taste tests for it's rich color, crunchy texture, and unbeatable flavor. Excellent for fresh eating, and a great canning variety.

Item No. CtMin
250 Seeds per pack

Tendersweet (*Daucus carota*)

65-75 days. Tendersweet Heirloom Open Pollinated Carrot is one of the sweetest carrots around. Tapered 7" deep orange roots are top qual-

ity, ideal for cooking. Tendersweet is coreless which makes them great for carrot sticks.

Item No. CtTen
250 Seeds per pack

Little Fingers (a.k.a. Little Finger, Lady Finger, Nantes Little Finger, Sweet Midget - Little Finger) (*Daucus carota*)

50-70 days. Gourmet, dainty, finger-sized carrots. The *Little Fingers Carrots* are deep orange, blunt-tipped, smooth skinned and have a small core. The color develops early, so they can be harvested at a young, tender stage for use as baby gourmet carrots. Small tops. The flavor is very sweet and far superior to grocery store baby carrots! Excellent for snacks, salads, soups, stews, canning or pickling whole.

Item No. CtLiF
250 Seeds per pack

Scarlet Nantes (Early Coreless, Scarlet Nantes Coreless) (*Daucus carota*)

65-68 days. A French heirloom introduced in 1855. The *Scarlet Nantes Carrot* is sweet, juicy, and nearly coreless. Stout, blunt roots grow to about 4-6", bright red-orange in color, and full of flavor. High in vitamins. A great choice for fresh eating, freezing and juicing.

Item No. CtScN
250 Seeds per pack

Cauliflower

Heirloom / Open Pollinated Cauliflower is a biennial, frost tolerant plant, that requires deeply-tilled, firm, fertile soil for good head or "curd" formation. Start heirloom cauliflower plants indoors about 6-8 weeks before the last frost. Plant cauliflower seeds ¼ - ½" deep. Germination occurs in 5-17 days in soil 55-75°F. Keep seedlings moist. "Harden-off" and then transplant outdoors into prepared bed two weeks before the last frost. Set heirloom cauliflower plants out in full sun, 12-24" apart, in rows 18-36" apart. To keep head white, tie a few inner leaves over curd if plant does not curl leaves in on it's own (make sure head and foliage are not wet when doing so; if wet, can cause rot). Harvest when heads are firm and full sized for variety, and before sections start to separate. Cut a few wrapper leaves with head. Heirloom Cauliflower plants will keep up to a few wks if you pull up the plant, and hang it upside down in a cool place, misting regularly with water.

Early Snowball A

(*Brassica oleracea*) 52 days.

Pure white heads are smooth, medium deep and 6 - 7" across and weigh 1 - 2 pounds. They must be harvested promptly for best results. **Item No.** CfESA 50 Seeds per pack

Snowball Self-Blanching

(*Brassica oleracea*)

65 days. This variety saves you work with it's self-wrapping leaves, preserving the white head

from sun and heat which will discolor cauliflower. The *Snowball Self-blanching Cauliflower*, is a neat old heirloom variety, which is getting difficult to find. Develops heads up to 6-8" in diameter, (does require tying of leaves over head if they get over 6 inches).

Item No. CfSfB 50 Seeds per pack

Snowball Y Improved

(*Brassica oleracea*)

68 days.

This cauliflower produces very flavorful, dense, heavy heads. The *Snowball Y Improved Cauliflower* is snow-white, with silvery-green leaves that curl around the head making this a very nice self-blanching variety. Heads grow to 5-6" in diameter.

Item No. CfSYI 50 Seeds per pack

Violetta Italia (*Brassica oleracea*)

85 days. Violetta Italia Heirloom Open Pollinated Cauliflower are large vigorous plants that produce large purple heads that blanch to green when cooked. Violetta Italia Cauliflower has a mild broccoli like flavor, attractive and easy to grow. **Item No.** CfViI 50 Seeds per pack

Celery

Heirloom / Open Pollinated Celery is one of the most challenging vegetables to grow, requiring a frost free (weather fluctuations and 7+ cold nights will cause young plants to "bolt" or set seed prematurely), cooler climate, with a long season, and plenty of water and nutrients. Start Celery seeds indoors 8-10 weeks before last frost. Plant seeds 1/8" deep. Germination should occur in 10-20 days at 55-70°F. Transplant Heirloom / Open Pollinated Celery when outdoor soil reaches 55°F. Set out in full sun, spacing plants 10-12" apart, in rows 18-24' apart. Harvest Celery when stalks large enough to use and have developed good color. Can harvest Celery stalks individually or pull whole plant and cut off roots.

Golden Self Blanche (a.k.a. Golden Self-Blanching, American or Fall Dwarf Strain, Burpee's Golden Self Blanching, Gigante Dorato)

(*Apium graveolens*)

85-100 days. An old-time favorite celery variety. *Golden Self-Blanche Celery* grows 25-30" tall and is full-hearted with pale yellow/green stalks. The plants are stocky, solid, and thick, with the stalks blanching easily. Te ribs are crunchy and tasty, without strings. A very popular tall celery for late fall use and winter storage. Excellent disease resistance.

Item No. CeGSB 200 Seeds per pack

Tall Utah 52-70 (a.k.a. Utah 52-70, Utah Giant 52-70, Utah Improved 52-70)

(*Apium graveolens*) 100-120 days.

A better choice for short seasons than other varieties, as it can be harvested at a young stage. *Tall Utah Celery 52-70* is an improved variety that grows taller,

with longer ribs, deeper green color and sweeter than the original Utah. This celery does not require blanching. Produces 11-12" stalks on plants that reach about 30" in height and are a medium dark green. *Tall Utah 52-70* is crisp, tender and tasty. Disease Resistant for Brown Check, Western Celery Mosaic.

Item No. CeTaU 200 Seeds per pack

Tendercrisp

(*Apium graveolens*)

90 -105 days.

Tendercrisp Heirloom Open Pollinated Celery is a Giant Pascal type with a 24" to 26" tall massive head. Tendercrisp has smooth thick dark green stalks, 11 to 12" to first joint. Good home garden variety.

Item No. CeTen 200 Seeds per pack

To sit back hoping that someday, some way, someone will make things right is to go on feeding the crocodile, hoping he will eat you last - but eat you he will.

- Ronald Reagan

Collards

Heirloom / Open Pollinated Collards are a cold hardy member of the cabbage family. Collards can be started from seed in early Spring when the soil temperature has reached 55-75°F, about 6-8 weeks before last frost, or for a Fall crop, plant mid-June to mid-July. Plant Collard seeds in full sun, ½" deep, a few seeds together (or more thickly if you want to use thinned young plants for an early crop), every 18-24", in rows 18-24" apart. Collards seeds should germinate in 5-17 days. When Collard plants reach 3", thin to the strongest plant in each group 18-24" apart. Start picking individual Collard leaves about 2 mos. after planting. Harvest Collards as needed, or pick and store in the refrigerator for a few days max. Collards usually survive into winter, down to 10°F, for a continued harvest. Collards tend to taste best after some frost exposure in fall!

Champion

(*Brassica oleracea L. Acephala*)

75 days. Champion Open Pollinated Collards have large dark green leaves that are slightly crumpled with a mild cabbage like flavor. Plants are very vigorous and frost tolerant. Champion Collards are great for spring or summer greens.

Item No. CoCha
250 Seeds per pack

Georgia

(*Brassica oleracea L. Acephala*)

80 days. Georgia Open Pollinated Collards are very winter hardy and used primarily in the south. Georgia Collards are vigorous, 2 to 3' tall with crumpled leaves.

Item No. CoGeo
250 Seeds per pack

Vates (a.k.a. Blue Stem, Vates Non-Heading)

(*Brassica oleracea L. Acephala*)

75 days. Vates Open Pollinated Collards is non heading and is also bolt and frost resistant. Vates has dark green crumpled leaves on vigorous spreading, upright 24" to 32" plants. Leaves are large and cabbage like.

Item No. CoVat
250 Seeds per pack

Collards

Corn - Broom

Corn is a warm to hot season annual, sensitive to cool soil. Direct seed when soil reaches 65-70°F. Plant seeds 1- 2" deep, 4-6" apart, in rows 20-30" apart, in full sun. Corn is wind pollinated, so plant in blocks of at least 4 rows. Germination should occur in 4 - 10 days in soil 65-85°F. When plants reach 4-5" tall thin to 8 -12" apart. Water regularly and deeply. For sweet corn, harvest when silk is drying and browning. For popcorn, flint, or dent corn harvest when kernels are hard and husks turn dry and loose their color. If weather turns too wet, corn can be brought inside to dry, laying out on screens, or hanging to dry.

Broom Corn (Mixed Colors) (*Sorghum bicolor*)

100-110 days. Not actually a true corn, rather it is an ornamental sorghum, very popular for decorations and crafts. *Mixed Colors Broom Corn* is a tall annual grass that looks like a corn plant, except that it makes fan-shaped seed heads instead of ears, appearing at the top of the plant in place of a tassel. The seeds are loved by birds, and are also edible and can be sprouted, cooked, popped, or ground into flour. Stalks grow 7-9' in height, with seed heads being 24-36" long. This *Mixed Colors Broom Corn* seed is, as the name implies, a mixture of many different broom corn varieties. The colors that predominate in this mix include gold, bronze, black, burgundy, red, white/cream, natural, and all shades of these colors. The broom heads can be harvested for brooms or ornamental

uses anytime after the seed head develops. Harvesting and drying the seed heads at various stages of development, result in varied appearances in the color of seed. As the plant matures, the seed heads will deepen in color and the seeds will become heavier and shiny, when dried they make a beautiful and unique addition to flower arrangements. The stalks when dried make excellent brooms, tie a few together to make a strong and long lasting broom. **Item No.** CnBrC 50 Seeds per pack

Corn

Corn - Sweet, Dent, and Flint

Black Aztec (a.k.a. Black Mexican) (*Zea mays*)

70-90 days. One of the few black corn varieties. Introduced in seed catalogs in 1864, *Black Aztec Corn* is great as sweet corn, but also makes delicious corn flour (makes a neat blueish-gray cornbread!). Stalks grow to 6', bearing 7-8" ears, that are white in the milk stage (sweet corn), and turn to a deep blue-black when

dry. Very hardy, grows well in many conditions.

Item No. CnBA 50 Seeds per pack

Bloody Butcher (*Zea mays*)

110-120 days. A beautiful blood red and dark red mix. *Bloody Butcher Corn* is an old heirloom dent corn dating from the 1800s. Main uses are meal and flour, but also tastes good roasted, and can be eaten fresh when young. Makes lovely fall decoration.

Plants grow 10-12' tall, bearing at least two 10-12" ears per stalk. Withstands heavy winds and drought well.

Item No. CnBB 50 Seeds per pack

Never open the door to a lesser evil, for other and greater ones invariably slink in after it.
- Baltasar Gracian, author

Corn - Sweet, Dent, and Flint (cont.)

Blue Hopi (*Zea mays*)
75-110 days. An heirloom flint corn traditionally used as a staple by the Hopi Indian Tribe in northern Arizona.

Blue Hopi Corn grows on bushy stalks about 5' tall, with 7-10" ears, with kernels turning dark blue at maturity. Extremely popular for making specialty foods such as blue corn tortillas, chips and breads. Very decorative.

Item No. CnBIH
50 Seeds per pack

Golden Bantam (a.k.a. Golden Bantam 8 Row or Yellow Bantam) (*Zea mays*)

70-85 days. Introduced to the corn market by W. Atlee Burpee in 1902. Prior to 1900 most people thought that yellow corn was fit only for animal feed. But shortly after the introduction of *Golden Bantam Sweet Corn* people in the U.S. began to actually favor yellow corn. *Golden Bantam* has been the family standard for sweet corn for generations now, and with good reason, with its fantastic sweet flavor that is great for fresh eating or freezing. Grows 5-6' tall and produces 5-7" ears, each filled with golden yellow kernels. Reliable, adaptable and very sweet for an open-pollinated heirloom corn.

Item No. CnGoB
50 Seeds per pack

Hickory King White (*Zea mays*)

90 days. A great variety for a number of uses. *Hickory King* is a dent corn used for roasting (when young), grits, corn-nuts, corn meal, and tortilla flour. Considered the best variety for hominy because the skin of the kernel is easily removed by soaking. The large flavorful kernels are the largest kernels of any variety of corn. Makes perfect trellises for beans, with it's very tall, sometimes 12' stalks. Ears grow to 7-8" with 10-12 rows of kernels. Does well in poor soil. Husks are tighter than most varieties and give excellent protection from beetles and earworm. Good disease tolerance.

Item No. CnHKW
50 Seeds per pack

Pencil Cob (*Zea mays*)
76 - 100 days. Pencil Cob Heirloom Open Pollinated Corn is an old Shoepeg type dry corn with very deep kernels and almost no cob. Pencil Cob is very sweet at the milk

stage and has sturdy 6 ft. tall plants.

Item No. CnPcC 50 Seeds per pack

Boone County White (*Zea mays*)
110-120 days. *Boone County White Corn* is one of the oldest of the heirloom white varieties, believed to have originated in Indiana and descended from 'White Mastadon', with its history dating back to at least the Civil War. Considered to be one of the finest of corn varieties specifically bred for roasting, it is known to be a favorite at festivals and fairs. 10-12' leafy stalks bear large 10-12" ears with 18-24 rows of pure white, delicious kernels. In its early use, it was grown extensively in the south for grinding and making corn bread, but is now often picked young for roasting. Also makes a good fodder crop.

Item No. CnBCW
50 Seeds per pack

Golden Bantam Improved (a.k.a. Golden Bantam 12 Row) (*Zea mays*)

75-82 days. This variety is an improved version of the old standard yellow sweet corn. *Golden Bantam Improved Sweet Corn* was selected for longer ears and improved tenderness. Although some like the smaller ears of the original *Golden Bantam*, others like larger ears. Instead of 8 rows, this variety has 10-14 rows on each ear. Excellent sweet flavor. An early main crop variety, a long time standard for home gardeners and market growers alike. Ideal for freezing and fresh eating.

Item No. CnGBI
50 Seeds per pack

Indian Flint (*Zea mays*)

105-110 days. A nice ornamental corn with large variegated ears, contrasting colors of red, blue, white, yellow, etc.. *Ornamental Indian Flint Corn* adds autumn color to centerpieces and arrangements. Use alone or with gourds, foliage or pumpkins. For ornamental corn leave on the stalk until kernels become hard.

Item No. CnInF 50 Seeds per pack

Ornamental Indian (*Zea mays*)

110 days. A beautiful multi-colored heirloom corn featuring ears of many colors, from blue and red, to purple, white, yellow and many shades in between. *Ornamental Indian Corn* ears are often used for decoration, a basket of Indian corn makes an attractive gift, and is a good seller at craft shows. Excellent for home gardens and market growers. Along with the many colored kernels, some ears have purple husks, adding to their ornamental beauty. **Item No.** CnOrI
50 Seeds per pack

Country Gentleman (a.k.a. Shoepeg Corn) (*Zea mays*)

83-100 days. Introduced in 1890 by Frank C. Woodruff of S. D. Woodruff & Sons, from Orange, Connecticut and the following year by Peter Henderson & Co. of New York. *Country Gentleman Sweet Corn* is an old-fashioned "shoe peg" type corn, meaning the creamy white kernels are in an irregular pattern as opposed to rows. Stalks grow to 7-8' tall, producing up to 3 ears each. Ears grow to 8", with tender, sweet, and creamy kernels. Makes some of the best cream corn you'll ever taste, which freezes well, giving you a taste of delicious sweet corn from your garden even on the most bitter winter days! Good for canning and freezing whole as well. Master fishermen find it makes a superior corn bait. Has better resistance to corn smut than earlier, smaller varieties of sweet corn.

Item No. CnCoG
50 Seeds per pack

Henry Moore (*Zea mays*)

110 days. Henry Moore Heirloom Open Pollinated Dent Corn has large flat kernels in 9 - 10" ears and the stalks are heavily leaved.

Henry Moore Dent Corn is exceptionally high in protein and is used for feeding livestock.

Item No. CnHeM
50 Seeds per pack

Corn - Sweet, Dent, and Flint (cont.)

Reids Yellow Dent

(*Zea mays*)

100 days. Reids Yellow Dent Open Pollinated Corn is the most popular yellow variety of roasting ear grown in this country. Adapted to virtually every state, especially western, central, and southern. Reids yellow Dent kernels are deep yellow with a lighter cap but often there is a reddish tinge that appears. Ears are 9" to 10" long and corn stalks are heavy, tall, and leafy. **Item No.** CnRYD

50 Seeds per pack

Truckers Favorite White

(*Zea mays*)

95-105 days. A nice white dent corn variety, a favorite for roasting or frying. *Trucker's Favorite White Corn* produces 9" ears with 16-18 rows of tender, sweet, white corn, on stalks 6-7' tall. As with all field corn, it is best picked during the early milk stage for fresh eating. The dried kernels can be ground for flour or used as livestock feed. Makes great cornbread. Widely adapted, but particularly well suited for the Cotton Belt and the South. Heat tolerant and does well, even in adverse weather conditions. Resists corn earworms. Disease Resistant. High yields.

Item No. CnTFW

50 Seeds per pack

Stowell's Evergreen

(*Zea mays*) 80-100 days.

Developed by Nathan Stowell of New Jersey in 1848 as a cross between Menomony Soft Corn and Northern Sugar Corn. After 150 years, *Stowell's Evergreen Corn*, is still the leading white variety for home gardens and market growers. Produces 9" ears, on 8' tall stalks, with 16-20 rows of plump, sweet white kernels. Remains in the milk stage a long time, hence the name 'evergreen'. A very good keeper, in fact in old times people would pull up the whole plant once mature, hanging the plants upside-down in a cool pantry; the ears would last well into the winter, in a semi-fresh state. Excellent for fresh eating, canning, and freezing. **Item No.** CnStE

50 Seeds per pack

Silvermine

(*Zea mays*)

97 - 110 days. Silvermine Heirloom Open Pollinated Corn has extremely high yields of large heavy 11" to 12" roasting ears with creamy white kernels. Silvermine is resistant to worm damage, excellent for shipping, heavy dark green husks holds there color well, and does well in poor soil. Silvermine was introduced in 1890. **Item No.** CnSiM

50 Seeds per pack

Truckers Favorite Yellow

(*Zea mays*)

70-105 days. A very hardy variety of dent corn commonly used fresh for roasting, much harder than any sweet corn, and can be planted weeks earlier. *Trucker's Favorite Yellow Corn* produces fine 8-10" ears with 14-18 rows of plump, tender, sweet corn on heavy stalks 8-8 1/2' tall. Preferred over the white for fresh eating. As with all field corn, it is best picked during the early milk stage for fresh eating. The dried kernels can be ground for flour or used as livestock feed. Widely adapted, but particularly well suited for the Cotton Belt and the South. Heat tolerant and does well, even in adverse weather conditions. Resists corn earworm's. Disease Resistant. High yields.

50 Seeds per pack

Corn - Popcorn

Calico Popcorn

(*Zea mays*)

90-105 days. A hard to find gourmet popcorn, midway between miniature popcorn and Indian corn in size. *Calico Popcorn* boasts 5-8" ears, full of color, with possible shades being yellow, brown, white, purple, red, blue, and calico. Used for popcorn or for decorations. Either way you use it, this is a very fun variety to grow. **Item No.** CnCaP

50 Seeds per pack

Carousel (Mini Popcorn)

(*Zea mays*)

104 -110 days. A very ornamental miniature popcorn. *Carousel Mini Popcorn* plants grow up to 8' tall with 2-3 ears per stalk, 3-4" in length. Colors include red, blue, yellow, and white, making this variety great for fall decorating. When used as popcorn the tiny kernels pop up crisp and tender, with very little hull. **Item No.** CnCar

50 Seeds per pack

Strawberry Popcorn

(*Zea mays*) 80-114 days.

A beautiful and unique variety used for gourmet popcorn as well as neat looking fall decorations. Kids love growing *Strawberry Popcorn* for its unique strawberry shape and color, and they love watching it pop, turning from ruby red to a delicious fluffy white snack! Plants grow to about 4', producing 2-4 ears each. Ears grow to 2-3" with irregularly spaced kernels. This variety is also used for edible sprouts, why not grow your own sprouting seeds this year. Sprouting them is easy, and you get an excellent corn flavor, with all the health benefits of home grown sprouts. Delicious and nutritious! Easy to grow, and because of the small size some even grow *Strawberry Popcorn* in tubs or containers. **Item No.** CnStr

50 Seeds per pack

Japanese Hulless

White Popcorn (a.k.a. Tom Thumb, White Rice, and Early White)

(*Zea mays*) 85-105 days.

A very old variety of popcorn that has not lost its popularity with home gardeners. *Japanese Hulless White Popcorn* is very prolific, producing 3-6 small 4" ears per stalk. Stalks are dwarf in habit, reaching only about 5' tall. Kernels are arranged irregularly on cob and are unusually tender, sweet, and pure white and nearly hullless when popped. Excellent white popping corn. **Item No.** CnJWH

50 Seeds per pack

South American Yellow Popcorn (a.k.a. Dynamite)

(*Zea mays*) 110 days.

Very high yields and great flavor make this hard to find variety the perfect choice for the popcorn lover. *South American Yellow Popcorn* produces 2 or 3 large 7-9" ears per 5' stalk, with 12-14 rows of large yellow kernels per ear. When popped they become mushroom shaped with a delicious buttery flavor.

Item No. CnSAY 50 Seeds per pack

Lady Finger (a.k.a. Lady Finger Rainbow)

(*Zea mays*)

105 days. Lady Finger Heirloom Open Pollinated Popcorn is an old heirloom that has become very popular and is in great demand among the Amish communities in Ohio and Indiana. Lady Finger has small yellow kernels that are very tender when popped. Short stocky plants yield 1 to 4 slender 6" to 7" ears of mostly yellow kernels with a sprinkling of red and purple.

Item No. CnLaF

50 Seeds per pack

Cucumber - Pickling

Heirloom / Open Pollinated Cucumbers are heat loving, frost sensitive vines. Plant heirloom cucumber seeds in full sun, ½ - ¾" deep, in 1' diameter hills of 4-6 seeds each, 3-4' apart. Germination occurs in 4-13 days in soil 70-95°F. Thin to 1-2 plants per hill. In short season climates you can start cucumber seeds indoors 3 weeks before last frost, in individual peat pots at least 3½" across. Harden off heirloom cucumbers plants for 1 week before setting out. Harvest regularly for continuous production, making sure to pick overripe cucumbers that were missed. Heirloom slicing cucumbers are best when uniformly green, firm and crisp. For pickles harvest cucumbers when 2-6" according to preference.

Boston Pickling (*Cucumis sativus*)

57 days. Boston Pickling is a popular old time standard for pickling. Boston Pickling has

vigorous vines that produce dark green fruit that are 5" to 6" long and 2" to 2.5" across.

Item No. CuBoP
25 Seeds per pack

Bush Pickle (*Cucumis sativus*)

45-50 days. A hard to find, compact, highly productive, open-pollinated variety. *Bush Pickle Cucumber* plants only grow to 3', about half the size of typical vining plants, making it even easier to get to the cukes at harvest time. Very nice for small gardens and container gardening on patios and rooftops, a popular way to grow your own vegetables these days! Try growing 2 plants in a 5 gallon container. Fruits grow to 4-5", medium green with white spines, and slightly tapered. Tolerant to Scab and CMV.

Item No. CuBuP 25 Seeds per pack

Homemade Pickles

(*Cucumis sativus*)

54-60 days. Boasts very heavy yields of small green cucumbers, bred especially for making pickles. The *Homemade Pickle Cucumber*

are a semi-bush type plant, producing solid, crisp, small, white spined fruits up to 5 1/2" in length. Can be picked starting at 1 1/2" for midget pickles, or at full maturity for dills. Good disease resistance.

Item No. CuHoP 25 Seeds per pack

National Pickling Improved

(*Cucumis sativus*) 54 days. A very prolific, old-fashioned variety, a favorite among gardeners. The *National Pickling Improved Cucumber* grows to 6" long, medium green, with black spines. They can be sliced for eating or used for pickles, a very versatile variety. The spines have to be rubbed and washed off before pickling.

Ideal for dill pickles. A great variety for the home gardener.

Item No. CuNPI 25 Seeds per pack

Wisconsin SMR 58 (a.k.a. Everbearing)

(*Cucumis sativus*) 54-65 days. A high yielding, vigorous and long bearing variety, developed at the University of Wisconsin. The *Wisconsin SMR 58 Pickling Cucumber* produces fine, straight, uniform, blocky, dark green cucumbers with black spines, slightly tapered at the ends. Resistant to Cucumber Mosaic, Scab, and Spot Rot.

Item No. CuSMR 25 Seeds per pack

Cucumber - Slicing

Bush Crop

(*Cucumis sativus*)

55 days. A very popular, quick maturing, easy to grow variety. The *Bush Crop Cucumber* produces delicious, 6-8" deep green fruits on compact,

bushy 18-36" plants. Perfect sliced in salads, or cut lengthwise and eaten as sticks, try them with dip, one of our favorite ways to enjoy them. Ideal for small gardens, or containers. **Item No.** CuBuC 25 Seeds per pack

Lemon Cucumber

(a.k.a. True Lemon, White Lemon, Lemon Apple, Apple Shaped, Apple, Crystal Apple)

(*Cucumis sativus*) 58 - 70 days. Lemon Cucumbers

have a real rich yellow skin when ripe and the flesh is white, crisp, mild, and burpless. Lemon cucumbers are much sweeter than other cucumbers and are great in salads. Fruit are shaped like a lemon or and apple and are not long. **Item No.** CuLem 25 Seeds per pack

Marketmore 76

(*Cucumis sativus*)

58-75 days. The *Marketmore 76 Cucumber* quickly became the standard in slicing cucumbers. Does very well even in hot weather, producing dark green, blocky, 8-9" fruits, white spined and tapered at both ends. Sweet and mild flavor. High quality and great yields. Disease resistance: CMV, PM, DM, ALS, AN, and scab. **Item No.** CuM76 25 Seeds per pack

Spacemaster 80 Bush

(*Cucumis sativus*)

57-64 days. This bush cucumber is perfect for small gardens, raised beds, or growing in containers, providing easy access at harvest. Has fine flavor, and does not turn bitter, even when grown in full sun. These compact plants produce very high yields of 7-8" fruits, dark green and smooth. Pick frequently for continual yields. Try them as Grandma always prepared them with onions, soaked in vinegar and salt and pepper. Oh, they were delicious! Disease resistance: downy and powdery mildews, scab, and mosaic virus. **Item No.** CuSpB 25 Seeds per pack

Straight Eight

(*Cucumis sativus*)

52-75 days. Introduced by Ferry-Morse Seed Company in 1935, and that very year won the *All-American Selections Award*! The *Straight Eight Cucumber* produces remarkably uniform, straight, dark green, 8" long, 2½" wide fruits, boasting a small seed cavity, with crisp fine-grained flesh. Perfect for slicing, salads, or dipping, and can be ground to make dill or sweet relish. Tolerant to mosaic. **Item No.** CuStE 25 Seeds per pack

White Wonder

(*Cucumis sativus*)

35-60 days. A fun and interesting variety to grow, kids and kids at heart, who love to grow unusual vegetable varieties, will enjoy trying

these in their gardens! *White Wonder Cucumbers* produce white or ivory 7-9" long, 2½-3" wide fruits. Excellent eating quality, with crisp, firm, mild flesh. Popular both for slicing and pickles! Or try them as Mom used to prepare them on hot Summer days, sliced up with onions in Ranch salad dressing, what a refreshing side dish! Highly productive, even in hot weather. **Item No.** CuWhW 25 Seeds per pack

Eggplant

Heirloom / Open Pollinated Eggplants are heat loving plants requiring a long growing season. In cool or short season climates start eggplant indoors 6-8 weeks before last frost, keeping soil at 75-85°F, by applying bottom heat. Transplant heirloom eggplant after the danger of frost, once the soil is warm. For direct seeding eggplant outdoors, plant in full sun, ¼" deep, 12-18" apart, in rows 2-2½' apart. Germination occurs in 5-17 days in soil 70-85°F. Stake tall heirloom eggplant varieties to keep the fruits off the ground. Start picking eggplants as soon as they're big enough to use, and are still glossy. Harvest with a knife or pruning shears. If eggplant fruits turn dull or brown, they are overripe.

Black Beauty (*Solanum melongena*)

80 days. Black Beauty Open Pollinated Eggplant produces a very high yield of round oval fruit that is glossy and deep purple in color. Black Beauty carries its fruit well off the ground so fruit stays much cleaner.

Item No. EgBlB 50 Seeds per pack

Florida Market (a.k.a. Cooks Strain)

(*Solanum melongena*) 78 - 90 days. Florida Market Open Pollinated Eggplants grow from 30" to 38" tall and produces fruit that is glossy, dark purple, and around 9" long. Florida Market Eggplant is almost resistance to sunscald and is very prolific.

Item No. EgFIM 50 Seeds per pack

Long Purple (*Solanum melongena*)

80 days. Long Purple Open Pollinated Eggplant grows from 20" to 38" tall and does well in the north. Long Purple Eggplant fruit is 8" to 10" long and has a firm but mild flesh. Yield 4 or more fruits per plant.

Item No. EgLoP 50 Seeds per pack

Rosa Bianca

(*Solanum melongena*)

70 days. Rosa Bianca Heirloom Open Pollinated Eggplant is an Italian heirloom with stunning light pink lavender fruits with an occasional creamy white shade. Flesh is meaty, mild flavored, with no bitterness.

Item No. EgRoB 50 Seeds per pack

Endive and Chicory

Batavian Full Heart

(*Cichorium endivia*)

80 days. Batavian Full Heart Heirloom Open Pollinated Endive has smooth upright broad outer leaves. Batavian Full Heart has

center leaves that are curly, bunched, and bleach well. **Item No.** EnBFH 200 Seeds per pack

Emerald Catalogna Chicory

(*Cichorium endivia*)

52 days. Emerald Catalogna Heirloom Open Pollinated Chicory is in the Endive family. Emerald Catalogna produces deep cut broad dandelion like leaves and stalks used for early greens with asparagus like flavor. Rapid grower and slow to bolt. **Item No.** ChEmC 200 Seeds per pack

Green Curled Ruffec

(*Cichorium endivia*)

90 days. Green Curled Ruffec Open Pollinated Endive readily blanches to a creamy white in the center. Green Curled

Ruffec is a popular home garden variety.

Item No. EnGCR 200 Seeds per pack

Salad King (*Cichorium endivia*)

50 - 100 days. Salad King Heirloom Open Pollinated Endive can be harvested as a baby leaf. As it matures it produces large dark green finely cut leaves that are vigorous and non bolting. Tie or rubber band outer leaves to blanch the inner 22 to 24 heart with white ribs. Salad King performs well under stress and works good as a summer or fall crop. Resists tip burn and frost.

Item No. EnSaK 200 Seeds per pack

Witloof (*Cichorium endivia*)

55 - 150 days. Witloof Heirloom Open Pollinated Endive was discovered in the mid 1800's in Belgium. Cut Witloof Endive early for tender baby leafs or let it grow in your garden for a full season Endive. Witloof plants grow 15 to 18" tall with a mild acidic flavor. Roots can be dried and toasted for a coffee substitute. In the fall you can trim the tops off and transplant indoors for a winter crop. **Item No.** EnWit 200 Seeds per pack

Garden Huckleberry

Heirloom / Open Pollinated Garden Huckleberries tolerate a wide variety of climates and conditions, but do not tolerate frost. Can direct sow or start garden huckleberries indoors 4-6 wks before last frost, transplanting outdoors after danger of frost. Sow seeds ¼" deep. Plant or set out garden huckleberries in full sun, or with afternoon shade in hot climates. Germination occurs in 5-15 days in soil 65-90°F. Thin plants to or set out plants 10-12" apart, in rows 2' apart. Garden Huckleberries are self supporting, but do sprawl, so caging or trellising is recommended where space is limited. Harvest in mid- to late August, after the berries have been black for two to three weeks and turn from glossy to dull.

Garden Huckleberry (*Solanum melanocerasum*) 75-80 days Originating in Africa, the *Garden Huckleberry* grows to 3 feet tall and resembles a pepper plant. Each plant bears hundreds of 1/2 in - 3/4 in, dark purple, almost black, berries all Summer long. Not recommended to eat raw, but they make wonderful jams, jellies, syrups, preserves, and pies. Can be canned or frozen for use all year round. The fruit is harvested when it turns from glossy to dull. Very easy to grow! Good soil is best. *Garden Huckleberry Pie* recipe included in every seed packet! **Item No.** ToGdnHb 25 Seeds per pack

Ground Cherry

May be direct seed Heirloom / Open Pollinated Ground Cherrys in long season climates, otherwise it is recommended to start indoors 4-6 wks. before last frost date. When direct seeding Heirloom / Open Pollinated Ground Cherrys, plant 0.25" deep. Plant in full sun or with afternoon shade in hot climates. Thin Ground Cherrys to 12-24" apart. Give an average water supply. Ground Cherrys plants are self supporting, but do sprawl, so caging or trellising is recommended in small Heirloom / Open Pollinated Vegetable Gardens. Ground Cherry Fruits are mature when husks are light tan, and fruits fall from plant.

Do not eat immature Heirloom / Open Pollinated Ground Cherries, as they contain a toxic compound!

Ground Cherry, Cossack Pineapple (*Physalis pruinosa*)

60-80 days This close relative of the tomatillo has a delightfully tropical taste, sweet, with a pineapple like flavor, a favorite among children. *Ground Cherries* are delicious fresh, but also are great in pies, preserves, hot dessert toppings, and even in salads, or on pizza for those who like pineapple on their pizza! Short plants, 12-18", produce large yields of bite sized fruits, golden-yellow in color at maturity, paper husk covering fruit will turn tan at maturity. Branches spread laterally, choking out weeds, and bushes have been known in some conditions to be large enough to require staking. A true heirloom, recorded as early as 1837 in Pennsylvania. A neat plant to grow, we have really enjoyed them!

Caution: Do not eat immature *Ground Cherries* as they are poisonous, containing the same compound as green potatoes, also dangerous to eat. Both are of the nightshade family. Wait until papery husks turn light tan in color to eat *Ground Cherries*.

Item No. ToGrCh 25 Seeds per pack

Herbs - Annual

Amaranth - Red Garnet (*Amaranthus hypochondriacus*)

Heirloom Red Garnet Amaranth produces oval shaped leaves with a unique flavor for salads. Amaranth - Red Garnet leaves are green over laid with

burgundy red from the center vane out. Gets the best red color in high heat.

50 Seeds per pack

Yarrow

(*Achillea Millefolium*)

Heirloom Yarrow has been used in many cultures for colds, fevers, and aids in healing wounds. Topically, crushed flower tops and leaves stop bleeding. The white flowers of Yarrow have stronger medical qualities than the leaves.

Item No. HeYar
300 Seeds per pack

Never rebuke while you're indignant about a fault committed - wait until the next day or even longer. And then, calmly, and with a purer intention, make your reprimand. You will gain more by a friendly word than by a three hour quarrel.

- Jose' Maria Escriva

Kale

Heirloom / Open Pollinated Kale is a short season brassica that performs best in cool weather and can tolerate frost when established. For spring planting of Kale, start seeds indoors 4-6 weeks before last frost, or direct sow after danger of hard frost. In warm climates you can plant Kale in late summer for fall harvest. In hot climates you can plant Kale in the fall for a winter harvest. Plant Kale in full sun in more mild climates, or partial shade in very hot summer climates. Sow Kale seeds ½" deep, 3" apart, in rows 18-24" apart. Germination should occur in 5-17 days in soil 55-75°F. When Kale plants reach 3-5", thin to 12-18" apart. Outer leaves can be harvested at about 8-10" long. Avoid picking the inner leaves to avoid damaging the growing point. A light frost brings out the sweetness in fall or winter crops.

Kailaan (Chinese)

(a.k.a. Kailaan White Flowered, Chinese Broccoli, Gai-Lohn, Kailan) (*Brassica oleracea*)

65 days. Kailaan

Open Pollinated Kale (also called Chinese Broccoli) is similar to broccoli, but it has sweeter, more succulent flavor.

Everything with Kailaan Kale can be eaten, including the leaves, stalks, buds, and flowers. Kailaan Kale can be steamed or stir-fried in just about any dish that you would use regular broccoli in. **Item No.** KaKaC

250 Seeds per pack

Red Russian (a.k.a. Ragged Jack)

(*Brassica oleracea*)

50 days. Red Russian Open Pollinated Kale has purple stems and leaves that are grey green with purple veins. Red Russian

will add lots of color to salads. Dip leaves in cold water to extend shelf life. Red Russian leaves are very tender compared to other kale varieties.

Item No. KaReR 250 Seeds per pack

Vates, Dwarf Blue Curled (*Brassica oleracea*)

55 days. Vates, Dwarf Blue Curled Open Pollinated Kale has sturdy upright compact plants 20" tall. Vates Dwarf Blue Curled is slow to bolt, very hardy with deep blue green curled leaves. Good for over wintering and resists yellowing in cold weather.

Item No. KaVaD 250 Seeds per pack

Scotch, Blue Curled (a.k.a. Scotch Dwarf Blue Curled, Dwarf Blue Scotch, Blue Scotch, Vates, Norfolk)

(*Brassica oleracea*)

53 - 65 days. Scotch Blue Curled Heirloom Open Pollinated

Kale has plants that are tall, curly, and dark green in color. Blue Curled Scotch shows good tolerance to yellowing in cold weather. Light frost improves flavor and is slow to bolt.

Item No. KaSBC 250 Seeds per pack

Kale

Kohlrabi

Heirloom / Open Pollinated Kohlrabi is a hardy biennial grown as an annual. Kohlrabi seeds can be started indoors 4-6 weeks before the last frost, then set out transplants when there are 6-8 true leaves and nighttime temps remain above 30° F. Direct sow Kohlrabi seeds 3-4 weeks before the last frost in spring, or in late summer for a winter harvest. Plant Kohlrabi in full sun, ¼ - ½" deep, 1" apart in rows 12-18" apart. Thin Kohlrabi plants to or set out transplants 3-8" apart. Germination of Kohlrabi seeds should occur in 5-17 days in soil 55-75°F. For extended harvest of Kohlrabi, stagger plantings throughout a month in spring or fall plantings. For tender sweet Kohlrabi, harvest when stem reaches 2" in diameter. For general use and storage crop harvest at 3-5" in diam. Fall Kohlrabi crops will remain hardy to 10°F.

Early Purple Vienna (*Brassica oleracea*)

60 days. Early Purple Vienna Open Pollinated Kohlrabi have bulbs that are reddish purple with tender white flesh. Use Early Purple Vienna when bulbs are 2" to 2.5" in diameter.

Item No. KoEPV 400 Seeds per pack

Early White Vienna (*Brassica oleracea*)

56 days. Early White Vienna Open Pollinated Kohlrabi bulbs have pale green skin with white flesh. Early White Vienna is very popular.

Item No. KoEWW

400 Seeds per pack

Kohlrabi

Leek

Heirloom / Open Pollinated Leeks are a cool season biennial grown as an annual, thriving in well-worked, composted, well-drained soil, and lots of water. Usually heirloom Leeks are planted in fall in the South and the spring in the North. Leeks can be direct seeded or greenhouse started (to yield larger plants). To start indoors, plant leek seeds 8-10 weeks before last frost, ½" deep, 4 seeds per inch, in rows 3" apart in seed starting tray (later thin to ½" apart). Germination usually occurs within 6-16 days in soil 55-75°F. Transplant leeks to the garden after danger of frost setting out 4-6" apart, in rows 12-18" apart, in full sun. For best flavor, hill leek transplants with soil to just below the leaf junction as they grow, or you can plant heirloom leek seeds or transplants in trenches 5-6" deep, and fill them gradually as the plants grow. Harvest heirloom leeks when stalk reaches ½ -2" in diameter. Using a pitchfork to loosen the soil around and under the plant helps with harvest.

American Flag (a.k.a. Giant Musselburgh) (*Allium ampeloprasum*)

120 days. American Flag Open Pollinated Leek have large straight necks, vigorous growing and good quality. American Flag will even winter over for an early winter crop.

Item No. LeAmF 250 Seeds per pack

Leek

Lettuce - Head

Lettuce is a cool season crop, that requires fertile soil, and lots of moisture. Can be started indoors in individual pots 6 wks before last frost, and set out in cold frames when 3 wks old. To direct seed, sow as soon as soil can be worked, 1/8" deep, 1" apart, in rows 16-18" apart. Germination occurs in 2-15 days in soil 40-75°F. Plant in full sun, or afternoon shade in hot climates. Thin out plants to, or set out at 10-16" apart. Can plant successive crops every 2-3 wks for longer harvest. In fall can plant again, starting 8 weeks before last frost. For loose leaf, can harvest the outer leaves early with a knife or scissors leaving the inner leaves to keep growing. For head lettuce harvest once the head becomes full and firm. It is best to harvest lettuce in the morning.

Bibb (a.k.a. Limestone, Limestone Bibb, Kentucky Bibb) (*Lactuca sativa*) 54 - 75 days. Bibb Heirloom Open Pollinated Butterhead Lettuce has loosely folded 3.5" heads with dark green

thick smooth brown tinged leaves, inside blanches golden yellow. Bibb does best if planted early, bolts in the hot weather.

Item No. LeBib
250 Seeds per pack

Buttercrunch (a.k.a. Buttercrunch Bibb, Butter King) (*Lactuca sativa*) 50 - 75 days. Buttercrunch Open Pollinated Butterhead Lettuce is crisp, tender, sweet, and slow to bolt. Buttercrunch has a larger 4.5" head with the center of the head blanching to a yellow white color.

Item No. LeBut
250 Seeds per pack

Great Lakes 118 (a.k.a. Great Lakes 118 M.T.) (*Lactuca sativa*) 63 - 90 days. Great Lakes 118 Open Pollinated Heading Lettuce produces large cabbage-like head with thick, broad, slightly crumpled leaves. With glossy dark green leaves this widely adapted variety is very cold hardy.

Item No. LeGrL
250 Seeds per pack

Iceberg (a.k.a. Black Seeded Iceberg, Giant Crystal Head) (*Lactuca sativa*) 82 days. Iceberg Open Pollinated Heading Lettuce is our most popular Head Lettuce. Iceberg has a large crisp head with curly leaves that have a mild flavor. Iceberg leaves are light green with a redish tinge.

Item No. LeIce 250 Seeds per pack

Summertime (*Lactuca sativa*)

70 days. Summertime Open Pollinated Heading Lettuce almost never becomes bitter from the summer heat. Summertime has a solid head on a low growing compact plant that is slow to bolt.

40 days. Tendergreen Open Pollinated Mustard that has a milder flavor and better drought tolerance. Tendergreen leaves are oblong, thick, smooth and glossy green. **Item No.** MuTen
250 Seeds per pack

Okra

Heirloom / Open Pollinated Okra is a tender, heat loving annual. Heirloom Okra seed can be direct sown in hot climates, or started indoors 3-4 wks before the last frost for an early crop or in cooler climates. Soaking Okra seeds for 2 hours before planting will speed germination. To start Heirloom Okra seeds indoors plant 1/2" deep in 3" pots. Outdoors plant seeds 1-2 weeks after last frost, 1/2" deep, 4-8" apart, in rows 36" apart. Thin Okra plants to or set out transplants 12-24" apart. Plant or set Okra out in full sun. Germination should occur in 7-15 days in soil 70-90°F. Harvest Okra pods often, to encourage continuous fruit set. Cut fruit from plant with shears or knife (to prevent damage to plant), when tender pods are 2-4" long. Okra plants have short hairs that can be irritating to the skin. If irritation occurs wear long sleeves and gloves when harvesting.

Clemson Spineless 80 (a.k.a. **Clemson 80**) (*Abelmoschus esculentus*)

55 days. Clemson Spineless 80 Open Pollinated Okra grows from 48' to 54' tall. Clemson Spineless 80 fruit are straight, ridged, short, thick, and have a wonderful flavor. **Item No.** OkCIS
50 Seeds per pack

Dwarf Long Green Pod

(*Abelmoschus esculentus*)
55 days. Dwarf Long Green Pod Open Pollinated Okra grows 2' to 3' tall and yields heavily. Dwarf Long Green Pod produces fruit that are dark green with shallow ridges. **Item No.** OkDLGP
50 Seeds per pack

Red Burgundy (a.k.a. **Burgundy**) (*Abelmoschus esculentus*)

60 days. Red Burgundy Open Pollinated Okra have an unusual red color. Pods stay red as long as they are fresh and turn green when cooked. Red Burgundy grows to 5' tall. **Item No.** OkReB
50 Seeds per pack

Helpful Information For Saving Your Seeds

Don't forget, seeds are live organisms and need to be cared for until it is time to plant them. The best place to store your seeds is in a cool, dry, dark location. A good storage spot is in a sealed glass jar in your refrigerator.

Short Lived Seeds (1-2 years): sweet corn, lupine, okra, onion, parsley, parsnip

Intermediate Seeds (3-4 years): alyssum, asparagus, bean, broccoli, carrot, celery, echinacea, kohlrabi, leek, lettuce, marigold, morning glory, pea, pepper, snapdragon, spinach, sunflower, sweet pea

Long Lived Seeds (4-5 years +): beet, brussels sprouts, cabbage, cantaloupe, cauliflower, chard, collards, cucumber, dent/flint corn, eggplant, endive, kale, mustard, nasturtium, pumpkin, radish, rutabaga, squash, tomato, turnip, watermelon

Years of seed viability listed are approximate and can be less or much more depending on environmental conditions.

Onion

Onion varieties are daylength sensitive: Short-day varieties do best in the South, Long-Day varieties in the North, and Intermediate-day length varieties can do well in both. They like fertile, well-drained soil. Seeds can be started indoors or direct seeded. To start indoors plant in pots or flats 8-10 wks before last frost, 1/8 - 1/4" deep, 2-4 seeds per inch. Germination will occur in 6-16 days in soil 60-75°F. Keep seedlings cut back to about 3" until transplanting to strengthen seedling. Outdoors, plant at same depth and rate, in rows 12-24" apart, as soon as soil can be worked. Can set out transplants once the soil can be worked, about 4 wks before the last frost. Set out or thin to about 3-5" apart. Onions like full sun. Harvest when tops dry and fall over. Cure in dry place for 2-4 wks.

Barletta (Pearl)

(*Allium cepa*)

70 - 100 days. Barletta Pearl Open Pollinated Onion produces beautiful silver white pickling onions. Barletta Pearl is one of the best cocktail onions available. Excellent served whole in

sweet-sour sauce, boiled, or pickled.

Item No. OnBaP 250 Seeds per pack

Texas Grano 1015Y

(*Allium cepa*)

175 days. Texas Grano 1015Y Open Pollinated Onion produces large 1 lb yellow skinned onion with sweet flavor. Texas Grano 1015Y is a short day onion.

Item No. OnTeG 250 Seeds per pack - \$2.25

Yellow Sweet Spanish (a.k.a. Giant Yellow Sweet Spanish, Yellow Sweet Spanish Jumbo)

(*Allium cepa*)

115 days. Yellow Sweet Spanish

Open Pollinated Onion is a leader for slicing. Large globe shape with a pleasing flavor that is fairly mild and sweet. Yellow Sweet Spanish is a long day type.

Item No. OnYSS 250 Seeds per pack

Evergreen White Bunching

(*Allium cepa*)

Evergreen White Bunching Open Pollinated Onion is a bulbless variety used only for bunching or fresh spring onions. Evergreen White Bunching Onions have stems that are long, white, tender, and have a fine flavor.

Item No. OnEWB 250 Seeds per pack

White Sweet Spanish (a.k.a. Giant White Sweet Spanish, White Spanish, Extra Early White Spanish)

(*Allium cepa*)

115 days. White Sweet Spanish Open Pollinated Onion is the best choice for onion rings or a salad onion. Flesh is white, mild with white skins. White Sweet Spanish Onion is a long day type and a good winter keeper.

Item No. OnWSS 250 Seeds per pack

Red Grano

(*Allium cepa*)

115 days. Red Grano Open Pollinated Onion is a short day large red onion with soft, mild flesh. Red Grano is tolerant to pink rot. Short to medium storage life.

Item No. OnReG 250 Seeds per pack

Walla Walla Sweet Spanish

(a.k.a. Walla Walla Sweet Yellow, Sweet Walla Walla, Giant Walla Walla, Walla Walla Yellow Sweet Spanish) (*Allium cepa*)

105 days. Walla Walla Open Pollinated Onion is an onion that is sweet right from harvest but must be used soon after because they are poor keepers. Walla Walla onions are an over wintering type for fall planting or spring planting in the north.

Item No. OnWWS 250 Seeds per pack

Onion

Parsnip

Heirloom / Open Pollinated Parsnip are biennial and its seeds are very hard to germinate. Heirloom / Open Pollinated Parsnip are direct seeded, covering the seeds with .5" of soil. Plant Parsnip Seeds in full sun or partial shade in hot climates. Germination usually occurs in 5 to 25 days. After Heirloom / Open Pollinated Parsnip plants come up, they should be thinned to 2"-3" for healthy growth.

Harris Model (a.k.a. All America, Early Short, Jung's White Sugar)

(*Pastinaca sativa*) 125 days. Harris Model Open Pollinated Parsnip is longer and slimmer than Hollow Crown. Harris Model has smooth, white, tapered roots that are free of side roots.

Item No. PrHaM 200 Seeds per pack

Hollow Crown Improved

(*Pastinaca sativa*)

125 days. Hollow Crown Improved Open Pollinated Parsnip is a popular variety that grows 10" to 12" long and up to 3" across.

Item No. PrHoC 200 Seeds per pack

Parsnip

Disorder in society is the result of disorder in the family.
- St. Angela Merici

Pea - Edible Pod (Snap)

Heirloom / Open Pollinated Peas are a cool weather crop, that like well drained soil and plenty of organic matter to assist with moisture retention. Direct sow Heirloom / Open Pollinated Peas as soon as soil can be worked in the spring. Plant Pea seeds in full sun, 1-1½" deep, 1 - 2" apart, in rows 18-24" apart. Pea seeds should germinate in 6-14 days at 45-75°F. No need to thin plants. Provide a trellis or other support for climbing varieties. Heirloom / Open Pollinated Bush Pea varieties usually do fine with a short trellis or planting in a block so Pea plants support each other. Harvest Heirloom / Open Pollinated Shelling Peas when pods are full and plump and peas are tender; Heirloom / Open Pollinated Snap Peas when the pods start filling out but are not yet fully mature; and Heirloom / Open Pollinated Snow Peas when pods are approx. 3" long and still flat, before seeds start to fill out.

Cascadia (*Pisum sativum*)
58-70 days. A winner of taste tests, known for great flavor, the pods are distinctly sweeter, crisper and juicier than Sugar Snaps, with a full pea flavor. The *Cascadia Edible*

Pod Pea is an heirloom-in-waiting, a vintage open-pollinated variety that produces good yields of succulent and tender, stringless 3-3½" pods, on compact, almost dwarf, 3' vines. Excellent fresh or for canning and freezing. These versatile peas can also be used like snow peas or left to mature for use as shell peas. Developed by Dr. James Baggett of Oregon State University. Disease Resistance: Powdery Mildew, Pea Enation Mosaic Virus, and Pea Wilt.
Item No. PeCas
50 Seeds per pack

Sugar Ann
(*Pisum sativum*)

56 days. Sugar Ann Open Pollinated Snap Pea is a short vine version of the famous Sugar Snap. If left on the vine Sugar Ann can be used as a shell Pea. **Item No.** PeSuA
50 Seeds per pack

Sugar Lace II
(*Pisum sativum*)

68 days. This variety is not only stringless, but nearly leafless as well, enabling plants to put more energy into yields, and making for easy harvest! The *Sugar Lace II Edible Pod Pea* has the same highly productive habit as the original, with even more disease resistance. Compact 24-30" plants have interlocking tendrils making them self-supporting, and eliminating the need for staking, producing distinctly sweet, large, dark green 3½" pods. Sets well in both Spring and Fall. Disease resistance: Pea Enation Mosaic Virus, Powdery Mildew, and Bean Leaf Roll Virus.
Item No. PeSuL
50 Seeds per pack

Sugar Bon
(*Pisum sativum*)

54 - 69 days. Sugar Bon Open Pollinated Snap Pea has self supporting vines that are 18" to 24" tall and heavy yields of pods 2" to 3" long. Sugar Bon is heat tolerant and is resistant to pea mosaic virus.
Item No. PeSuB
50 Seeds per pack

Sugar Snap (a.k.a. New Sugar Snap, Cascadia) (*Pisum sativum*)

53-72 days. The original sugar snap pea, and 1979 winner of the *All-American Selections*

Award! The *Sugar Snap Edible Pod Pea* produces heavy yields of flavorful 2½-3½" pods, on tall 6' vines. Crisp, sweet pods are considered by many to be the best flavored of all the edible pod peas. Pods are delicious fresh, and great in salads, can be snapped just like green beans. Tastes great steamed. Freezes well, does not tolerate the heat of canning well. Can be left on the vines until mature for excellent quality shelling peas. Does develop strings at maturity, so they will need to be stripped. Vines require support. Frost resistant. Tolerant to Pea Wilt.

Item No. PeSuS
50 Seeds per pack

Super Sugar Snap (*Pisum sativum*)

62-70 days. Same great flavor of the Sugar Snap Pea, but with plumper pods, and higher yields than some other varieties, and more disease resistance. The vines of the *Super Sugar Snap Edible Pod Pea* are vigorous and prolific, growing to 55-65" and producing twice as many pods as most varieties. Try fresh off the vine, with dip, in salads, steamed or stir fried. Makes an excellent addition to vegetable trays! Bears over a long period in both cold and hot weather. Disease resistance:

Powdery Mildew and Pea Leaf Roll Virus.
Item No. PeSSS 50 Seeds per pack

Sugar Sprint PVP
(*Pisum sativum*)

58 - 62 days. Sugar Sprint Open Pollinated Snap Pea is a sugar snap type almost two weeks earlier than other stringless snap peas. Sugar Sprint grow to 26" tall and are self supporting. Both pods and peas are very sweet, and have resistance to powdery mildew and tolerance to pea enation mosaic virus.

Item No. PeSuSp

When one door of happiness closes, another opens; but often we look so long at the closed door that we do not see the one which has been opened for us.

- Helen Keller

Pea - Edible Pod (Snow)

Dwarf Grey Sugar - Snow Pea (Dwarf Gray Sugar Cabbage Pea) (*Pisum sativum*)

57-66 days. An old heirloom variety dating back to 1773, and introduced by D.M. Ferry & Co. in 1892. The *Dwarf Gray Sugar Snow Pea* vines grow to

about 2-3', and are self supporting, requiring no staking. Green foliage has a lovely purplish tinge, and plants bear pretty, edible reddish-lavender blossoms. Blossoms make lovely garnish for your special dishes, so grow some extra for garnish, as those blossoms taken for accent will not develop into a pea pod. It is said that *Dwarf Gray Sugar* has the very best leaf tips, tendrils, and top leaves for eating (they are briefly steamed or stir-fried). The pods are delicious steamed or stir-fried. Flat, fleshy, curved, semi-pointed light-green pods grow to 3-5", being best when picked at 2½-3½". Pods grow in clusters at top of plant, making harvest easy. Suitable for northern and southern regions, as it is tolerant to heat and cold. Very prolific variety! Disease Resistance: Fusarium Wilt.

Item No. PeDGS 50 Seeds per pack

Mammoth Melting Sugar - Snow Pea (*Pisum sativum*)

65-75 days. A wonderful heirloom variety, the largest of all the edible pod peas, it truly lives up to it's name. The *Mammoth Melting Sugar Snow Pea's* tall vines grow to 4-7' bearing very sweet and tender, stringless 4-5' pods. Best picked before peas begin to form. They are delicious fresh, in a salad, steamed, stir-fried and are a great sugar pea for freezing for later use. Vines require staking. White sweet pea

blossoms make this an attractive plant to add to your landscape! High yielding, likes cool weather. Uniform variety. High in Vitamins A, B, and C! Resistant to Pea Wilt.

Item No. PeMaM 50 Seeds per pack

Oregon Sugar Pod II - Snow Pea (*Pisum sativum*)

60-68 days. A very productive early variety with short, compact vines that grow to about 28-30". The *Oregon Sugar Pod II Snow Pea* produces high yields of smooth, light-green, stringless, broad 4 in. pods, sweet and flavorful. Delicious steamed or fresh. Freezes well, with no loss of color or flavor. Easy to grow, and does not require trellising. Developed by Dr. James Baggett of Oregon State University.

Disease Resistance: Fusarium Wilt, Powdery Mildew, and Pea Enation Mosaic Virus, and adding Mildew resistance to the original Oregon Sugar Pod allowing good Fall harvests.

Item No. PeOSP 50 Seeds per pack

Pea - Shelling

Pods are not eaten, rather peas are grown to maturity, shelled, and enjoyed!

Early Frosty (*Pisum sativum*)

60-68 days. A very prolific home garden variety, with high yields of 3½-4" pods bearing 7-8 uniform, dark green, medium-sized peas. The *Early*

Frosty Garden Pea is a very tender, delicious, and excellent quality pea. Perfect for freezing, eating fresh, or selling fresh at the market. Vines grow to 28-30 in., often with double pods. Very vigorous variety, widely adapted. *Early Frosty* is a great variety for places with short growing seasons or cold springs. Disease Resistance: Fusarium Wilt.

Item No. PeEaF 50 Seeds per pack

Progress #9 (a.k.a. Laxton's Progress #9, Greater Progress, and Blue Bantam) (*Pisum sativum*)

58-65 days. A leading large-podded, home garden, heirloom variety. The *Progress #9 Garden Pea* is a superb tasting old-time favorite, bearing large 4-5" pods, with 6-9 peas each. Wrinkled, dark-green seeds are of fine quality. Dwarf vines grow to 15-20 in., and when grown close together in a block will support each other and choke out weeds. This is our favorite way to grow many of our peas and beans! This variety originally developed in Britain. Disease Resistance: Fusarium Wilt.

Item No. PePro 50 Seeds per pack

Lincoln (*Pisum sativum*)

67 days. Lincoln Open Pollinated Shelling Pea has been a long time favorite for many. Lincoln is noted for its high quality, small tender,

sweet peas. This pea shells easy and really stands out for its fresh eating flavor. Lincoln peas are very productive and tolerates hot weather.

Item No. PeLin 50 Seeds per pack

Spring

(*Pisum sativum*)

52-57 days. A very early variety, developed for commercial freezing. The *Spring Garden Pea* sets 5-7 pods each plant, with 3 in. pods bearing 6-8 medium-sized peas. Dark-green, wrinkled peas are of excellent quality. Plants are fast growing and reach about 18-22". Disease Resistance: Fusarium Wilt (Race 1).

Item No. PeSpr 50 Seeds per pack

Maestro (a.k.a. Improved Alaska) (*Pisum sativum*)

55-61 days. A terrific variety, very early and highly prolific! The *Maestro Garden Pea* produces 4-4½" pods packed with 9-12 dark-green, medium-sized peas. This variety has a buttery delicious flavor, and are known to be tender and sweet. Highest sweetness when picked before full maturity. Excellent fresh or frozen, easy shelling by hand. Pods stand out on 24-30 in. plants, making it easy to see them at harvest time. Long-lasting growth allows for multiple pickings. A hardy and widely adapted variety. A great choice for regions where other peas do not grow well. Disease Resistance: Powdery Mildew, Pea Enation Mosaic Virus, Bean Yellow Mosaic, and Common Wilt.

ever been able to satisfy the heart?
- St. Gerard Majella*

Pea - Cowpea

California Blackeye #5 (a.k.a. Blackeye Cowpea #5) (*Vigna unguiculata*)

60-95 days. A Southern home-garden favorite! The *California Blackeye Cowpea #5* bears large, smooth seeds, cream colored with a black "eye", as the name suggests. They have delicious flavor, and can be used either fresh or dried. Often prepared with either ham or salt pork, and served with rice and spinach, the dish being called "Hoppin' John". They are very high in protein (20%), low in fat, and high in Vitamin B1. Plants of this variety are semi-spreading, erect, and high-yielding, with pods concentrating at the crown, making harvest easy. Pods grow to about 8-12". Disease Resistance: Common Wilt and Nematodes. **Item No.** PeCaB 50 Seeds per pack

Mississippi Cream Pea (*Vigna unguiculata*)

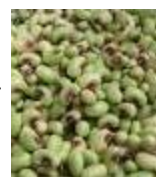

70 days. Mississippi Cream Heirloom Open Pollinated Pea is tolerant to RKN and most viruses. Mississippi Cream has pods that are 7" long with nearly white seeds at the green shell stage. Has high yields and can be used fresh, frozen or canned.

Item No. PePHP
50 Seeds per pack

Pepper - Hot

Heirloom / Open Pollinated Peppers are heat loving plants that are easy to grow, and do well in a variety of climates. Start seeds indoors 8-10 wks before the last frost. Soaking Heirloom / Open Pollinated Pepper Seeds for 2-8 hrs before planting helps speed germination. Plant ¼" deep in chosen containers. Germination will occur in 8-25 days at 75-90°F. Keep soil evenly moist (not soaked) for best germination. Harden off Pepper plants, then transplant to the garden about 2-4 wks after the last frost date. Plant Heirloom / Open Pollinated Peppers in full sun, spacing about 12-18" apart, in rows 24-30" apart. For a more mild flavor, Heirloom / Open Pollinated Hot Peppers can be harvested once they reach full size and are still green. Although Heirloom / Open Pollinated Hot Peppers can be picked when green, their flavor and heat will increase when allowed to mature and ripen colors, especially to full maturity. **It is best to use a knife or pruning clippers when harvesting to avoid damage to Heirloom / Open Pollinated Pepper plant. Be careful not to get oils on skin, in eyes, etc. when harvesting.**

Anaheim (a.k.a. Anaheim Chile, and Long Green Chile) (*Capsicum annum*)

70-90 days. As the name suggests this open-pollinated chile pepper variety was given its name when brought to the

Anaheim, California area by a farmer named Emilio Ortega in the early 1900s. The *Anaheim Hot Pepper* is a **mildly-hot** variety, producing chile peppers 6-8½" long by 1½" wide, tapered or conical in shape, two-celled, of medium thickness, and pungent in flavor. The fruits are a dark green, turning to red at maturity. Plants are bushy, upright, 24-30" in height, and bearing continuously through the season. These chile peppers are great roasted, fried, stuffed, in stews and sauces, raw, canned, or dried. Popular for chile rellenos or strung into restras.

Item No. PpAna
25 Seeds per pack

Ancho 101 (a.k.a. Pablano Chile (when fresh), and Pasilla Chile) (*Capsicum annum*)

68-85 days. A heart-shaped open-pollinated chile pepper that tapers to a blunt point, often used for stuffing, that

finds its origins in Mexico. The *Ancho 101 Hot Pepper* starts as a very dark, almost black, green, maturing to a deep mahogany red. These chile peppers are **mildly-hot** and grow to 4-5" long by 2-3" in width, with medium thick walls. Plants grow to 30-36", with a spreading habit. *Anchos* are mildly hot, and are great fresh (referred to as Pablanos) or dried (referred to as Anchos). They are ideal for stuffing, and are popular for Rajas, Chiles Rellenos and other South Western dishes, in mole, or ground into Chile Powder.

Item No. PpAnc
25 Seeds per pack

Cayenne, Large Red Thick (a.k.a. Large Thick, and Large Long Red) (*Capsicum annum*)

64-80 days. A **fiery hot** open-pollinated chile pepper variety, quite aromatic, with thick, wrinkled flesh, that turns from green to fire-red at maturity. The *Large Red Thick Cayenne Hot Peppers* grow to 5-7" long by 1¼-1½" wide at the shoulders, and are tapered and slightly curved. The strong, upright plants are large and open, allowing for easy harvest. Set is concentrated, and harvest shorter than some. These chile peppers are very pungent even when small. Great for use in hot sauces, dried, pickled or in salsas.

Item No. PpCLR
25 Seeds per pack

Cayenne, Long Thin (a.k.a. Long Red Slim Cayenne, Slim Cayenne, Long Narrow Cayenne, Long Thin Cayenne, and Long Red Narrow) (*Capsicum annum*)

70-75 days. A long slender variety of open-pollinated Cayenne chile pepper, a dependable producer and favorite of gardeners for years now. The *Long Slim Cayenne Hot Pepper* grows on large vigorous 22-30" spreading plants, producing bountiful harvests of 5-6 long by ¾" chile peppers. Two celled fruits are thin,

tapered, and wrinkled turning from dark-green to bright red at maturity. This chile pepper variety is **very hot**, and great for use in chili and homemade salsa. Also excellent for pickling, canning, and drying (dries very easily), a nice variety for decoration!

Item No. PpCLT 25 Seeds per pack

True independence and freedom can only exist in doing what's right.
- Brigham Young

Pepper - Hot (cont.)

Cherry, Large Red (a.k.a. Large Hot Cherry, Cherry Hot, and Hot Red Cherry) (*Capsicum annuum*)

69-85 days. A late, but very productive open-

pollinated chile pepper variety. The *Large Red Cherry Hot Pepper* is a **medium-hot** variety, bearing flattened-globe shaped, 1" by 1½" chile peppers, medium-dark green turning to bright red at maturity. Plants grow to 24" and bear continuously throughout the season. Great for small pickles, canning, and are easy to dry. Adds great spice to your favorite Southwestern dishes!

Item No. PpChL
25 Seeds per pack

Jalapeño, Early (*Capsicum annuum*)

60-68 days. With this open-pollinated variety you now can harvest this ever-popular **medium-hot** chile pepper even earlier! The

Early Jalapeño Hot Pepper produces heavy yields of 3-4" long by 1½" wide thick-walled, bullet-shaped chile peppers, turning from green to red at maturity. Most popularly used early at the green stage, but they are at their hottest when fully red and mature, for those who love **hot chile peppers**. Compact, non-brittle, sturdy plants grow to 24". Great pickled, fresh, and chopped up in burritos, sauces, or your favorite Mexican dishes. Mature jalapeño chile peppers are also mesquite smoked to create that favorite ingredient in Southwestern and Mexican cooking, the chipotle. This variety is more adapted to cool climates than the other jalapeños, and very vigorous.

Item No. PpJaE
25 Seeds per pack

Santa Fe Grande (a.k.a. Caribe) (*Capsicum annuum*)

73 - 100 days. Santa Fe Grande Hot Pepper are upright 24 to 28" plants that produce loads of 3 1/2" con-

ical blunt tip fruit that are yellow to orange to red at maturity. Santa Fe Grande is resistant to tobacco mosaic virus. Scoville rating 4000 - 6000 **Mildly Hot**

Item No. PpSFG
25 Seeds per pack

Fresno Chili (*Capsicum annuum*)

75 days. Heirloom Open Pollinated Fresno Chili Hot Pepper is **Mildly Hot** and produces fruit 2 to 3" long that are tapered to a point. Fresno Chili

matures green, 24 to 30" plants have dense dark green foliage. Resistant to Tobacco Mosaic Virus. Scoville rating 900 - 3500 **Mildly Hot**

Item No. PpFrC
25 Seeds per pack

Hot Hungarian Yellow Wax (a.k.a. Hungarian Yellow Wax, Bulgarian, Hungarian Wax, Hungarian Long Wax, and Hot Banana Hungarian Wax No. 2) (*Capsicum annuum*)

55-85 days. A **medium-hot** old-world favorite open-pollinated chile pepper. The *Hungarian Yellow Wax Hot Pepper* has a sunset-ripening habit, changing from yellow to orange to red when mature. Fruits grow to 5-8" long by 1-2" wide, tapering to a point. Walls of these chile peppers are of medium thickness. Plants are strong and upright, growing to 16-24 in., bearing early and continuously throughout the season. The best hot pepper variety for cool climates, widely adapted to a number of climates. Great for home gardens, market, and processing. Heat rises as the chile peppers mature. Most popularly used at the early stage, when still yellow, having a sweet-hot flavor. Excellent pickled, grilled, stuffed, fried, roasted (peels easily after roasting), in yellow mole sauce, fresh or canned.

Item No. PpHHY
25 Seeds per pack

Mulato Isleno (*Capsicum annuum*)

70 - 90 days. Heirloom Open Pollinated Mulato Isleno Hot Peppers are excellent for stuffing, very fat, measuring 6" x 3". Mulato Isleno fruit are

dark green to red to red black with a mildly distinctive flavor. Use fresh or dry. Scoville rating 500 - 1500 **Mildly Hot**

Item No. PpMul
25 Seeds per pack

Orange Habanero (*Capsicum chinense*)

90-100 days. An **EXTREMELY hot** open-pollinated chile pepper variety native to the Yucatan Peninsula of Mexico. The *Habanero Hot Pepper* is 100 times hotter than the Jalapeño Pepper, and is the hottest open-pollinated hot pepper available! The fruits are lantern shaped, growing to 1" by 1½", with wrinkled light-green flesh turning to a golden-orange at maturity. This variety is known to be slow to germinate, and needs warm moist conditions, it's best to start this chile pepper variety indoors. Plants grow to 36" and are very prolific. Primary use is in hot sauces, oil extracts, salsas, and powders; can be dried, coarse ground, or used whole. Highly disease resistant. A Caribbean favorite!

Item No. PpHaO
25 Seeds per pack

Jalapeño, Mid (a.k.a. Jalapeño M) (*Capsicum annuum*)

75 days. A mid-season open-pollinated variety of the most popular hot chile pepper around! The *Jalapeño Mid Hot Pepper* is very prolific, producing lots of 3-3½" long by 1½" wide bullet-shaped, thick-walled **medium-hot** chile peppers, very pungent in flavor, but more mild than some of the other jalapeños. Fruits are dark-green, turning to red at maturity, when they reach their greatest **heat**. Plants grow to 26-36", are dark-green and upright, providing good cover. This is the most popular jalapeño chile pepper variety grown in Mexico. A favorite sliced into rings and sprinkled over nacho's and in homemade salsas and sauces! Great for home gardens, market gardens, and processing. Does well in the North.

Cast yourself into the arms of God and be very sure that if He wants anything of you, He will fit you for the work and give you strength.

- St. Philip Neri

Pepper - Hot (cont.)

Serrano (a.k.a. Serrano Chili and Serrano Hidalgo) (*Capsicum annuum*)

75-90 days. The *Serrano Chili Hot Pepper's* name comes from the word serranía meaning "hill range" after the mountain ridges of Puebla and Hidalgo in Mexico from where it is thought to have originated. The candle flame shaped, medium-thick walled, **medium-hot to very-hot** open-pollinated chile peppers grow to 2-3" in length by ½" wide, and are a glossy green, changing to bright red at maturity. Plants are erect, branching, vigorous and prolific, growing to 26-34", and producing up to 50 pods each, bearing

continuously throughout the season. *Serranos* are used at both the green and red stage. Has a distinctive flavor, sometimes described as clean with a bite, having no after-burn. A favorite chile pepper for hot salsas, guacamole, and sauces, easy to prepare as they do not require peeling. Simply roast the peppers remove the stem, dice, and add to your favorite Mexican dish! Also used for pickling and drying. One of the hottest and easiest chile peppers grown by home gardeners.

Sweet Pepper type producing thick walled green to golden yellow to deep orange fruit. Fruit is smooth and glossy colored.

Item No. PpGCW 25 Seeds per pack

Orange King

(*Capsicum annuum*)

90 days. Heirloom Orange King Sweet Pepper are blocky, thick walled, 3-4 lobed, 3 1/2 to 4" orange colored bell pepper. Great flavor. If you want to add some color to your sweet bell pepper mix, this one will do it.

Item No. PpOrK 25 Seeds per pack

Sunbright

(*Capsicum annuum*)

75 days. Heirloom Sunbright Sweet Pepper yields 5" to 7" fruit with thick walls. Sunbright peppers start green and then turning to a nice yellow color. Sunbright is a nice high yielding sweet pepper that is great for the home garden or a roadside stand.

Item No. PpSun

25 Seeds per pack

Purple Beauty

(*Capsicum annuum*)

70-75 days. The best open-pollinated purple bell pepper on the market. Produces lovely fruits, starting out an emerald green, and

turning to a beautiful eggplant purple when ready to eat, finishing out as a deep red when at full maturity. These bell peppers are thick walled and meaty, 3-4 lobed and blocky, growing to 3-4" in length by 3-3½" in width. Plants are compact, growing to 17", with thick protective foliage. Produces well for an open-pollinated bell pepper variety, as many as twelve fruits per plant in a season. Tender-crisp peppers have a mildly sweet flavor. Will add unique color to salads, delicious sliced fresh or in stir-fry. Kids will enjoy growing these unique beauties. Disease resistance: Tobacco Mosaic Virus.

Item No. PpPuB

25 Seeds per pack

Sweet Banana (a.k.a. Yellow Banana, Long Sweet Hungarian, Hungarian Wax Sweet, Hungarian Banana)

(*Capsicum annuum*)

58-75 days. Heirloom Sweet Banana Pepper fruits average

5.5" long by 1.5" wide with a tapered blunt point. Sweet Banana pepper is medium, thick walled, light yellow and turns to red when mature. **Item No.** PpSwB

Yolo Wonder

(*Capsicum annuum*)

78 days. Yolo Wonder Sweet Pepper is a vigorous, mostly upright plant that adapts well to most areas and climates. Yolo Wonder fruits are blocky, very mild, sweet, thick walled and are 4.25" by 3.75" in size. Yolo Wonder Sweet Peppers have good leaf coverage to protect against sunburn.

Item No. PpYoW 25 Seeds per pack

Sweet Cherry

(*Capsicum annuum*)

78 days. Sweet Cherry Sweet Peppers have cherry shaped fruit and are red in color when ripe. Sweet Cherry bushy upright 20"

plants bear heavily. **Item No.** PpSwC

25 Seeds per pack

Pumpkin

Heirloom / Open Pollinated Pumpkins are a warm season crop, sensitive to frost and light freezes. Start heirloom pumpkins indoors 3-4 wks. before the last frost date in cooler climates or direct seed outdoors after danger of frost. Plant or transplant pumpkins to full sun. To direct seed, plant 4-5 pumpkin seeds 1" deep, 6-8" apart in a circle at the center of 3' diameter hills, with a trench around each hill to aid water in reaching the root system. Thin to best 2-3 plants in each hill at the set of true leaves. Or plant pumpkin seeds in rows 1" deep, 2-3' apart. Space rows and hills 6-10' apart. Germination should occur in 5-10 days in soil 65-85°F. Keep soil just damp during germination, or seeds may rot. Harvest heirloom pumpkins when the rind has hardened and finger nail requires pressure to pierce rind. Leave 3-4" stem on when cutting from the plant for longer storage.

Big Max

(*Cucurbita maxima*)

120 days. Big Max Open Pollinated Pumpkins can weigh up to 100 lbs! Fresh market and home garden with skin that is a pink or-

ange in color. **Item No.** PuBiM

250 Seeds per pack

French Breakfast

(*Raphanus sativus*)

24 days. French Breakfast Open Pollinated Radish has a scarlet colored root with a white tip that is oblong in shape. French Breakfast roots grow to 3/4" wide and 2" to 3" long.

Item No. RaFrB
250 Seeds per pack

Fuego

(*Raphanus sativus*)

24-25 days. Fuego Open Pollinated Radish has a round shaped root that is red in color. Fuego is early at 24 to 25 days.

Item No. RaFue
250 Seeds per pack

German Giant

(*Raphanus sativus*)

29 days. German Giant Open Pollinated Radish will grow to the size of a baseball. German Giant is bright red and remains crisp with no cracking.

Item No. RaGeG
250 Seeds per pack

White Icicle

(*Raphanus sativus*)

30 days. White Icicle Open Pollinated Radish has slender roots that are 4 to 5" long. White Icicle skin is white, crisp and

tender.

Item No. RaWhI
250 Seeds per pack

Rhubarb

Rhubarb is a cool season/climate crop, typically grown as a perennial. Soak the seeds in water for 2 hrs before planting. Start seeds indoors 6-8 wks before last frost, planting 1/8 - 1/4" deep, 2 seeds each in individual peat pots for ease of transplanting. Plant at least 20 seeds, and cull plants that do not exhibit typical characteristics of variety. Seeds should germinate in 6-18 days in soil 70°F. Harden off 2 wks before last frost, set out in full sun, in deeply dug soil with lots of organic matter, 18-24" apart. Keep well watered and weeded. Harvest stalks by pulling rather than cutting. Wait until 2nd yr. to begin harvest, and only a little then. 3rd season can harvest more, and harvest all season the 4th year. **Caution: Do not eat the leaves of rhubarb plants as they contain oxalic acid which is toxic.**

Victoria (*Rheum rhabarbarum*)

Victoria Open Pollinated Rhubarb has the darkest red stems of the seed types. Victoria rhubarb stalks are broad thick tender and dark red.

Item No. RhVic

*Of what use are riches in eternity?
- St. Aloysius Gonzaga*

Rutabaga

Heirloom / Open Pollinated Rutabaga is a hardy, cool-weather biennial, grown as an annual. Direct sow Rutabaga 4-6 wks before the last frost in spring, in late summer for fall harvest, and in mild winter climates in fall for a winter harvest. Plant Rutabaga seeds in full sun, 1/4 - 1/2" deep, 1-2" apart in rows 18-24" apart. Germination should occur in 5-17 days in soil 45-75°F. Once Rutabaga seedlings are well established, thin to 4-8" apart, to give the root bulb room to grow. Harvest rutabagas when bulbs are about 3-5" in diameter for best quality and flavor. Rutabagas are best stored at 33°F and 90-95% relative humidity.

American Purple Top

(*Brassica napus* var. *napobrassica*)

90 days. American Purple Top Open Pollinated Rutabaga have huge round yellow roots with a rich purple crown. American Purple Top Rutabaga is firm sweet and has a good flavor. The flesh turns orange when cooked.

Item No. RuAPT 300 Seeds per pack

Laurentian (*Brassica napus* var. *napobrassica*)

90 days. Laurentian Open Pollinated Rutabaga is an Improved American Purple Top Strain with creamy yellow globe roots that are deep purplish red above ground. Laurentian Rutabaga is almost neckless with 4" to 6" roots that are uniform, mild firm, and have a good flavor with no side shoots.

Item No. RuLau 300 Seeds per pack

Spinach

Spinach is a cool season crop, growing best in Spring and Fall. Rich, fertile, well-drained, soil is best for optimum production. Direct sow seeds in very early spring when soil can be worked and has reached 50°F or in Fall, in full sun or partial shade, ½" deep, 1" apart, in rows 12" apart. Germination usually occurs in 6-21 days in soil 50-65°F. Thin plants to 3-6" apart. Keep soil evenly moist. A good dose of fertilizer rich in nitrogen will help produce the best spinach. Can begin harvesting baby greens from outside of plant when they reach 3-4", and harvest entire plant upon reaching full maturity, before plant starts to set flowers, if buds begin to form, harvest immediately. Harvest in the morning for best flavor.

Bloomsdale Long Standing (Long Standing, Bloomsdale Savoy Long Standing, Bloomsdale Long Standing Dark Green, American Bloomsdale Extra Long Standing) (*Spinacia oleracea*) 39-60 days An excellent old-time favorite heirloom spinach variety, dependable and delicious, by far the most popular variety on the market! *Bloomsdale Long Standing Spinach* stands well in hot weather, without bolting (going to seed prematurely). These vigorous, semi-upright savoyed (crumpled) spinach leaves are dark-green and glossy, with a thick, fleshy texture. High in Vitamins A, B, and C, and a great source of folic acid, iron, magnesium, calcium, potassium, and riboflavin. *Bloomsdale Long Standing Spinach* is great steamed, boiled, or cooked in your favorite recipe calling for spinach. Makes a great salad by itself with your favorite toppings or add spinach leaves to your favorite salad greens for an extra boost in vitamins and minerals. A great choice for multiple plantings. For first crop, sow in spring. Plant again in late summer. In mild winter areas, fall plantings yield in early spring. **Item No.** SpBLS 200 Seeds per pack

Spinach - Malabar

Malabar Spinach is heat loving, and does not tolerate frost, doing best in hot, long season climates. A frost free season of 150 + days is best for seed production. Can extend season in cooler climates by starting indoors 7-8 wks before last frost. Scarring the seed coat with a file or sandpaper, or soaking seeds overnight will help speed germination. Direct sow seeds (or set out transplants) 2-3 wks after last frost, in full sun. Plant seeds ¼-½" deep, 6" apart, in rows 12-18" apart. Germination usually occurs in 10-21 days when the temperature is 80° +. Thin plants to, or set out transplants 12-18" apart. Plants are vining and require a trellis to climb. Keep evenly watered. Can start harvesting leaves and stems as soon as the main stem is about 1' tall as vines will continue growth. Pick leaves at about 2-3", after that they tend to be slimy. Harvest before the vine flowers for best flavor.

Malabar (a.k.a. Basella, Ceylon Spinach, Indian Spinach, Land Kelp, Malabar Nightshade, Malabar Climbing Spinach, Poi Sag, Vine Spinach) (*Basella alba*) 60-70 days This lovely variety is highly decorative, easy to grow, and very nutritious. *Malabar spinach* is a native of Africa and Southeast Asia, and is perfect for hot climates, as it loves hot, humid weather, producing fast and luxurious growth. An excellent choice for those who want spinach in the Summer! *Malabar Spinach* does not bolt (go to seed prematurely), even in extreme heat. Vigorous climbing plants grow to 6-10', producing big glossy bright-green leaves. Young leaves can be cooked and added to recipes. Great in soups, stews, stir-fry, steamed, boiled or in tofu dishes. In Japan, it is cooked in tempura or braised and topped with a sesame dressing. Do be careful not to overcook as it can become slimy. Fresh leaves make a great salad. Leaves are similar in texture and flavor to kelp or swiss chard, and some say the flavor reminds them of beets. Often used as a thickening agent in the Orient, or in place of okra in the South. Leaves can also be used to make a tea. Vines do need a trellis or an arbor to climb, makes a lovely ornamental addition to any garden! Frost sensitive. **Item No.** SpMal 50 Seeds per pack

Spinach - New Zealand

New Zealand Spinach is a heat loving, short-lived, frost intolerant, perennial. We recommend soaking the seeds for 24 hrs before planting, then direct sow seeds in full sun, covering with ½" of soil. Germination usually occurs in 7-10 days, but can be difficult. These plants like to sprawl, so you may want to trellis them to conserve garden space. Thin plants to 12-20" apart.

New Zealand Everbearing (Everlasting, Tetragone, Della Nuova Zelanda, Perpetual Spinach, Sea Spinach)

(*Tetragonia tetragonioides*) 50-70 days A very old heirloom introduced into England in 1772 by Sir Joseph Banks; reported to have been discovered during the South Seas expedition of Captain Cook. *New Zealand Spinach* is not a true spinach, but is similar in flavor and use, in fact some prefer it to regular spinach. This variety is a perennial, but is typically grown as a warm-weather annual. Large, strong, spreading plants branch out, sprawling freely, producing small, brittle, fleshy, deep-green leaves. *New Zealand Spinach* is a warm season vegetable that grows well in hot weather and dry conditions. *New Zealand Spinach* will not bolt (go to seed prematurely), or get bitter. Use the same as your regular spinach. Great fresh for salads or on sandwiches in place of lettuce. Also excellent cooked and added to dishes calling for spinach. A great source of vitamin A, vitamin B1, vitamin B2, and vitamin C! For best absorption of these valuable nutrients it is recommended to blanch the leaves for 3 minutes, then refresh in cold water. In their natural form, the nutrients are hard to digest and absorb, however blanching changes them into a form more easily digested by the body. Disease and insect resistant, a good alternative to disease and pest prone regular spinach varieties. **Item No.** SpNeZ 25 Seeds per pack

Squash - Summer

Summer squash is a warm season crop, sensitive to frost and light freezes. Start indoors 3-4 wks. before last frost date or direct seed outdoors after danger of frost. Plant 6-8 seeds, 1" deep, in 1' diameter hills, thinning to 3 or 4 plants at the set of true leaves. Or plant seeds in rows 1" deep, 1' apart, later thinning to 3-5' apart. Space rows and hills 6-10' apart. Days to germination: 5-10 in soil 65-85°F. Keep soil just damp during germination, or seeds may rot. In general summer squash have the best flavor and tenderness when picked young.

Bennings Green Tint

(*Cucurbita pepo*)

49 days. Bennings Green Tint Heirloom Summer Squash was introduced in 1914. Bennings Green Tint

produces pretty pale green pie shaped fruit. Delicious when steamed and then served with butter, salt and pepper.

Squash - Winter

Winter squash is a warm season crop, sensitive to frost and light freezes. Start indoors 3-4 wks. before last frost date or direct seed outdoors after danger of frost. Plant squash in full sun. To direct seed, plant 6-8 seeds, 1" deep, in 1' diameter hills, thinning to 3 or 4 plants at the set of true leaves. Or plant seeds in rows 1" deep, 1' apart, 3-5'. Space rows and hills 6-10' apart. Germination should occur in 5-10 days in soil 65-85°F. Keep soil just-damp during germination, or seeds may rot. Harvest when rind has hardened and finger nail requires pressure to pierce rind. Leave 2-3" stem on when cutting from plant for longer storage.

Burgess Strain Buttercup

(*Cucurbita maxima*)

95-100 days. A turban type squash with dark green rind, and blocky shape, has a gray "button" on the blossom

end. The *Burgess Strain Buttercup Squash* has an excellent flavored, fiberless, dark orange flesh, which is thick and dry. Very good winter keeper, also good for canning. Fruits grow to 3-5 lbs. A New England favorite. **Item No.** SqBBS

25 Seeds per pack

Bush Buttercup, Emerald Strain

(*Cucurbita maxima*)

85-100 days. Upright 3-4' wide bushes produce heavy yields of small smooth rounded turbans, the color of a Blue Hubbard squash. The *Emerald Strain Bush Buttercup* has thick, deep, sweet, dry, yellow-orange flesh. Fruits are high quality, 3-5 lbs. each. Delicious baked, steam, cans or freezes well. Perfect variety for small gardens!

Item No. SqBBE

25 Seeds per pack

Delicata (a.k.a. Delicatesen, Sweet Potato Squash, Delicata Sweet Potato, and Peanut)

(*Cucurbita Pepo*)

95-100 days. Introduced in 1894 by Peter Henderson, this variety remains popular today for it's sweet, delicious, sweet potato-like flavor. The *Delicata Squash* gets the nickname Peanut Squash from it's oblong shape, growing to 7-9" in length, by 3" in diameter. This unique squash is highly attractive with its ivory skin, striped with dark green from end to end. The flesh is fine-grained and light orange in color. Delicious, steamed, baked, stuffed, in soups, or in any winter squash recipe. Short prolific vines. A very good keeper.

Item No. SqDel

25 Seeds per pack

Always remember that choosing the lesser of two evils is still choosing evil.

Squash - Winter (cont.)

Golden Delicious (a.k.a. **Hubbard Golden Delicious**) (*Cucurbita Maxima*)

100-105 days. Introduced by Gill Bros. Seed Co. of Portland Oregon in

1926, this variety was developed from a cross between *Delicious* and *Boston Marrow*. Heart or top shaped, the *Golden Delicious Squash* has a striking red-orange exterior with bright orange-yellow, thick, fine-grained flesh. Fruits grow to 7-9 lbs., measuring 10-12" in length, by 8" in diameter. Originally developed for use in baby food, these squash are sweet and delicious, with excellent flavor, they are not watery, keep well, but also freeze and can well. great baked or in soups. High in vitamins C and A. **Item No.** SqGoD
25 Seeds per pack

Hubbard, Golden (a.k.a. **Red Hubbard, and** **Genesee Red Hubbard**) (*Cucurbita maxima*)

90-105 days. Introduced in 1898, this enduring beauty is on of the most attractive of the hubbards. The *Golden Hubbard Squash* is teardrop in shape, with a hard, moderately warted, brilliant red shell, bearing tan stripes at the blossom end. Fruits weigh 8-10 lbs., and are 10-12" in length, by 8-9" in diameter. Flesh is solid, thick, sweet, fine-grained, and dry, orange-yellow in color, and with fine flavor. Popular with both home gardeners and commercial growers. Keeps well, also cans and freezes well. Very nice for Fall decorations!

Item No. SqGol
25 Seeds per pack

Hubbard, Blue

(*Cucurbita maxima*)

100-120 days. Another New England favorite, this reliable old-time variety produces large, 15- 40 lb. fruits (we actually got a 45.5 lb beauty in our 2009 garden!), on vigorous vines. The *Blue Hubbard Squash* is a pretty blue-gray-green, slightly ridged, coarsely-warted, with a neck at both ends. Flesh is bright orange, fine textured and sweet. Great in pies, or cut into pieces and baked or steamed. The hard shell makes this variety a very long keeper. It also makes it hard to cut, a very large Chef's knife or machete work well on the large squashes like this.

Item No. SqBlu
25 Seeds per pack

Hubbard, True Green Improved (a.k.a. **True Hubbard, and Improved Hubbard**)

(*Cucurbita maxima*)

100-115 days. Originally introduced for sale in the 1840s by seedsman, J.H. Gregory, who named it after Elizabeth Hubbard of Marblehead, MA. who, recognizing the qualities of this excellent squash brought it to the Gregory's stating that "it was the best squash she had ever tasted in her life". The *True Green Improved Hubbard Squash* has a beautiful dark bronze-green shell, tapered at both ends. The flesh is sweet, dry, and fine-grained, golden yellow in color, and delicious in flavor. The fruits grow to 12-16" in length, by 9-10" in diameter, weighing around 10-15 lbs. Large vines. Excellent keeper and shipper. Easy grower, does well in all regions of the U.S. **Item No.** SqTGI
25 Seeds per pack

Sweet Dumpling (a.k.a. **Vegetable Gourd**) (*Cucurbita pepo*)

95-105 days. Very productive plant, with up to 10 squash per compact vine. The *Sweet Dumpling Squash* is teacup shaped, creamy in color, with dark green stripes. One of the sweetest squashes around, with tender flesh, delicious baked and stuffed. Excellent keeper, does not even require curing, and will keep well for 3-4 months. Fruits are about ½ lb, perfect for a single serving.

Item No. SqSwD
25 Seeds per pack

Hubbard, Chicago Warted (a.k.a. **Green Chicago Warted Hubbard, Hubbard Improved**)

(*Cucurbita maxima*)

105-115 days. An old heirloom developed by Bud long Gardens of Chicago and introduced by Vaughans Seed Store of Chicago in 1894. The *Chicago Warted Hubbard Squash*'s very vigorous vines bear hard shelled, dark green fruits, heavily warted and of a true hubbard shape. Fruits weigh in around 12-16 lbs., and measure 12-14", by 10" in diameter. Flesh is thick, dry, sweet, and fine-grained. Great for pies, baking, or freezing. A very good shipper, and excellent keeper, keeping until late spring.

Item No. SqChW

Item No. SqPBJ
25 Seeds per pack

Sweet Meat (a.k.a. **Sweet Meat Oregon**)

(*Cucurbita maxima*)

85-110 days. A favorite of the Northwest, developed in Oregon, and introduced by the Gill Bros. Seed Company of Portland, Oregon. The vines of the *Sweet Meat Squash* are very vigorous, and require a good amount of room to grow, crowding out other plants if not given their space. Fruits have a very hard, thick slate-gray skin, with a thick golden-yellow flesh, sweet dry, and fiberless. Fruits grow to about 10-20 lbs., and are very hardy, keeping for many months. They have a delicious buttery flavor that sweetens with age. This squash is excellent baked or in pies. Can be baked, and the leftovers frozen for later use. Because of its tender dry texture, it can be used in place of summer squash in recipes during the winter, when the summer squash are all done with for the year.

Item No. SqSwM
25 Seeds per pack

Never make a decision without stopping to consider the matter in the presence of God.

- St. Jose Maria Escriva

Squash - Winter (cont.)

Table Queen Acorn (a.k.a. Danish, Pepper Squash, Des Moines) (*Cucurbita pepo*) 75-90 days. A dark green acorn shaped heirloom squash that is descended from a heart shaped squash grown by the Arikara Indians in the early 1800s. The *Table Queen Acorn Squash* was first introduced by the Iowa Seed Co. in

1913. Deep orange flesh is fine-textured, sweet, dry, and thick. Good for baking, and immature fruit can also be used as a summer squash. Good for storage. Fruits weigh about 1 ½ lbs, and grow to 4 x 5 ½ in.

Item No. SqTQA 25 Seeds per pack

Vegetable Spaghetti (a.k.a. Spaghetti Squash) (*Cucurbita pepo*) 90 days. Introduced by Sakata Seed Co. of Japan, in 1934. May have originated in China. A popular low calorie alternative to pastas. The *Vegetable Spaghetti Squash* produces vigorous spreading vines, with 5-7 fruits per plant.

Fruits have a buff skin, turning pale yellow at maturity, with a pale yellow interior flesh that breaks up into spaghetti like strands when cooked. Squash are 8-12" long, by 5-6" in diameter. Boil whole for 20-30 min, or bake. Use as spaghetti with your favorite sauce, or as a pasta substitute in homemade macaroni and cheese. Or try with butter and salt and pepper. Its taste is nothing like spaghetti, it has a slight sweetness and, if not overcooked, is crunchy and somewhat watery, something like a cucumber. Spaghetti squash contains many nutrients including folic acid, potassium, vitamin A, and beta carotene. **Item No.** SqVeS 25 Seeds per pack

Turks Turban (a.k.a. Aladdin's Turban, Mexican Hat and Turk's Cap Gourd) (*Cucurbita maxima*)

80-125 days. Highly decorative and colorful buttercup type squash, this heirloom dates back to pre-1800. This variety has been gaining popularity for its decorative qualities. The *Turk's Turban Squash/Gourd* is orange and red and white on green, with a distinctive cap or turban on top. The fruits grow to about 8-12" in diameter, and weigh 5-10 lbs. Keeps well if not bruised during harvest and storage. They are fair eating quality. Can be baked plain or stuffed. Very popular at roadside vegetable stands. * Note: Some call this variety a squash, some a gourd, it is the same variety either way it is listed.

Item No. SqTuT 25 Seeds per pack

Waltham Butternut

(*Cucurbita moschata*) 95-110 days. The most popular of the winter squashes. The *Waltham Butternut Squash* was introduced in 1970 by Bob Young of Waltham Massachusetts and is an *All-American Selections* Award winner. Buff colored rind with fine-

textured, sweet orange flesh, that is creamy and rich, with a nutty flavor. Stores very well, lasting sometimes 6 months or even longer. Very resistant to vine borers. Vigorous and dependable. Fruits average 8-9" long, and weigh 3-6 lbs. Great for steaming, boiling, baking, or even harvest young and use as a summer squash.

Item No. SqWB 25 Seeds per pack

Swiss Chard

Swiss Chard is hardy and prolific, tolerating poor soil and inattention, it can withstand frost and mild freezes. Direct sow seeds in spring 1-2 weeks after soil can be worked. Can be planted from April to mid-July. Soaking seeds for 15 min in warm water prior to planting will speed germination. Plant seeds in full sun (can tolerate part shade) ½" deep, 1-2" apart, in rows 18-24" apart. Should germinate in 5-17 days in soil 50-75°F. When plants reach 3", thin to 4-10" apart. Water regularly for best growth and to prevent bolting (going to seed prematurely) and bitterness. Can be harvested continuously. When plants reach about 6" can begin harvesting the outer leaves, leaving the inner leaves to continue growth. Can also cut off the whole plant 2" above the ground and it will grow new leaves.

Fordhook Giant (*Beta vulgaris* var. *cicla*) 55 days. Fordhook Giant Open Pollinated Swiss Chard is a vigorous variety. Fordhook Giant has white stalks that are 2 1/2" wide with leaves that

are dark green, fleshy and thick.

Item No. SCFhG 150 Seeds per pack

White Cloud

(*Beta vulgaris* var. *cicla*) 35 - 60 days. White Cloud Open Pollinated Swiss Chard has a nice white colored stalk with green leaves. White Cloud is a very tasty and crunchy swiss chard.

Item No. SCWhC 150 Seeds per pack

Ruby Red

(*Beta vulgaris* var. *cicla*) 35 - 60 days. Ruby Red Open Pollinated Swiss Chard has beautiful crimson stalks that look like Rhubarb. Ruby Red red crimson color extends into dark green, heavily crinkled leaves. This swiss chard has a sweet and wonderful taste.

Item No. SCRuR 150 Seeds per pack

Lucullus

(*Beta vulgaris* var. *cicla*) 50 days. Lucullus Open Pollinated Swiss Chard is a non bolting type with dark green leaves, white midribs and stalks. Lucullus Swiss

Chard produces greens from spring until first hard fall frost. Very popular variety that handles summer heat very well.

Item No. SCLuc 150 Seeds per pack

Magenta Sunset

(*Beta vulgaris* var. *cicla*) 35 - 60 days. Magenta Sunset Open Pollinated Swiss Chard has light red or pink (like a sunset) stalks and ribs 21" to 26" tall with green leaves. Magenta Sunset is very tender and very heat tolerant. **Item No.** SCMaS 150 Seeds per pack

55 days. Rainbow Mix Open Pollinated Swiss Chard is a blend of Ruby Red, Golden Sunrise, Magenta Sunset, and White Cloud. Harvest at 35 days for baby Swiss Chard. **Item No.** SCRaM 150 Seeds per pack

Tomatillo

May be direct seeded in long season climates, otherwise it is recommended to start indoors 4-6 wks. before last frost date. When direct seeding plant 0.25" deep. Plant in full sun or with afternoon shade in hot climates. Thin to 12-24" apart. Tomatillos like an average water supply. Plants are self supporting, but do sprawl, so caging or trellising is recommended in small gardens. Fruits are mature when husks are light tan, and fruits split the husk.

Purple Tomatillo (*Physalis ixocarpa*)

68 days Makes a very attractive purple salsa. The *Purple Tomatillo* plant is also very attractive, with purple veins in the leaves, and light green to buff colored husks on the tomatillo themselves. This variety has a sharper flavor and is sweeter than the green tomatillo. Can be eaten fresh, but most popular in sauces, salsas, stewed, fried, or made into pastes. A delicious combination for salsa includes tomatillos, tomatoes, peppers, purple onion, garlic, and fresh herbs like basil, thyme and oregano. Stores well for a tomatillo, stores longest when removed from husks and placed in a sealed plastic bag in the refrigerator.

Item No. ToPPt 25 Seeds per pack

Toma Verde Tomatillo (*Physalis ixocarpa*)

60-70 days This popular tomatillo is known to make a very tasty "Salsa Verde", which some say is superior to red salsa. The *Toma Verde Tomatillo* is adapted to grow well in a wide range of climates, growing quickly and giving good yields of large green tomatillos. They do best in same growing conditions as tomatoes, but can handle more drought and heat. The fruits are surrounded by a papery husk that turns from green to brown as they ripen and splits open when they are ready to harvest. Tomatillos are the key ingredient in fresh and cooked Latin American green sauces, particularly hot chili sauces. Makes an excellent addition to any Mexican dish or salad. **Item No.** ToToVe 25 Seeds per pack

Tomatillo

Tomato

Start indoors 6-8 weeks before last frost date. Plant the seeds ¼" deep in sterile seed starting mix. Germination occurs in 6-14 days in soil 70-90°F. Once true leaves develop, separate plants into 3-4" pots, placing in full light & cooler temps (60-70°F). Set out hardened off transplants, in full sun, once soil has warmed, 18-30" apart, in rows 3-4' apart. Plant tall, spindly seedlings deeper, the stems will sprout roots and support and strengthen the plant. For indeterminate vines provide cages or trellises. Can harvest at first blush of color, setting out in a single layer under newspapers at room temperature to ripen. To vine ripen, leave on vine until full color and firm yet beginning to soften.

Abe Lincoln (*Lycopersicon lycopersicum*) 87 days This is the original strain of Abe Lincoln Tomato. Abe Lincoln Heirloom Open Pollinated Tomato has beautiful large dark red fruits that are sweet, solid

and meaty. The fruit tend to be smooth and free from cracks and seams. Abe Lincoln is an **Indeterminate** tomato. **Item No.** ToAbe 25 Seeds per pack

Anna Russian)

(*Lycopersicon lycopersicum*)

65-80 days A wonderful heirloom tomato variety from Brenda Hillenius of Oregon who's grandfather had obtained seeds from a Russian immigrant many years ago. A typical oxheart variety with lovely wispy **indeterminate** vine plants, bearing small delicate foliage, often making the unsuspecting believe the plant is dead. The *Anna Russian Heirloom Tomato* sets forth numerous clusters of 2-3 delicious pink-red, oxheart shaped, crack-resistant, 8-16 oz. fruits, meaty and juicy, mild and sweet flavor with a hint of tang to it.

Item No. ToAR 25 Seeds per pack

Ace 55

(*Lycopersicon lycopersicum*)

75-85 days An outstanding variety bred specifically for market growers. The *Ace 55 Tomato* is resistant to cracking, bruising, and bursting, a perfect farmers market tomato. Has a nice sweet flavor, without the acidic taste of other tomatoes. These medium-large **indeterminate** plants have good foliage cover and produce 7-12 oz. red, thick walled, flattened globe shaped, meaty tomatoes, perfect for eating fresh. They are not the best for canning, however, due to their low- acidity. If canned, they must be pressure canned to prevent botulism. Very good disease resistance.

Item No. ToA55 25 Seeds per pack

Amish Paste

(*Lycopersicon lycopersicum*)

70-85 days One of the largest of the paste tomatoes, known for it's wonderful flavor. The *Amish Paste Tomato* is an heirloom that was discovered among the Amish in Wisconsin, although it originates with the Pennsylvania Amish. With a nice balance of sweet and acid, this tomato is great for eating fresh, canning, and is especially terrific for sauces. These large **indeterminate** plants produce high yields. The fruits are oxheart, almost teardrop in shape, deep red in color, with thick flesh, and few seeds, weighing approx. 8-12oz. Needs special attention to support as plants tend to be droopy. This is one of our favorite tomatoes, and many we know swear by it to be one of the best paste tomatoes!

Item No. ToAP 25 Seeds per pack

Arkansas Traveler (a.k.a. Traveler) (*Lycopersicon lycopersicum*)

80-90 days An old-time, reliable Southern heirloom tomato variety developed at the University of Arkansas, addressing the specific problems Southern gardeners experience with tomatoes. The *Arkansas Traveler Heirloom Tomato* was bred to be resistant to heat, humidity, disease, and cracks. Bears abundantly all through the heat of Summer! Smooth, rose-colored, round 6-8 oz. fruits are mild and sweet in flavor, juicy, and thick walled. Excellent for fresh eating, canning, drying, and salsa, too. Plants are **indeterminate** and like to sprawl, can grow rather large. Disease Resistant. **Item No.** ToAT 25 Seeds per pack

Box Car Willie

(*Lycopersicon lycopersicum*)

80 days Box Car Willie Heirloom Open Pollinated Tomato has prolific yields of 10 to 16 oz smooth red or orange fruit. Box Car Willie

Tomato has an old fashioned flavor and is a multi-use tomato that will last throughout the season for canning, freezing, and fresh eating. Resistance to cracking and good disease tolerance. Box Car Willie Tomato is **Indeterminate**. **Item No.** ToBCW
25 Seeds per pack

Brandywine (Pink)

(*Lycopersicon lycopersicum*)

80-90 days An old-time heirloom favorite introduced in the 1880s. The *Brandywine Pink Heirloom Tomato* has won countless taste contests with it's outstanding rich flavor, and creamy aftertaste, sought after by gardeners and connoisseurs year after year. Large, strong, **indeterminate** plants bear nice yields, with large fruits growing to 1 lb. or more. These lovely heirloom tomatoes are large, red-pink, flattened and irregular in shape. The large potato-like leaves help protect the tomatoes from sun-scald. This is a great slicing tomato, perfect for sandwiches, hamburgers, sliced tomatoes to go with cottage cheese, the ideas go on and on! Like other potato-leaf tomato varieties the yields are not terribly high, pollination can be improved by flicking the blossoms with your fingers or gently shaking the plants. **Item No.** ToBrWn

Watermelon

Watermelon are heat loving plants that prefer well drained loose soil and an even amount of water. Plant in rows or hills but make sure the soil is well warmed. In cooler climates can start seeds indoors 2-4 wks. before last frost to extend the growing season. Plant seeds 1/2 - 1" deep. Plant seeds or set out transplants in full sun. For rows plant 6-12" apart, in rows 6-10' apart. For hills plant 4-6 seeds per hill, in 1' diameter hills, with hills 6-10' apart. Germination should occur in 3-10 days in soil 70-85°F. In hills thin to 2 plants per hill. In rows thin plants to or set out transplants 24-36" apart. Harvest when fruit sounds hollow when thumped, when surface color turns dull, or underside turns yellow.

Allsweet (*Citrullus lanatus*)

(*Citrullus lanatus*)

95-100 days. Moon & Stars Open Pollinated Watermelon weigh in at 40 lbs and have bright red flesh with excellent flavor. Moon & Stars have a rind that is dark green with yellow splashes all over.

Item No. WaM&S

20 Seeds per pack

Flowers

Alyssum - Carpet of Snow

Annual Carpet of Snow Alyssum make a nice fragrant low growing border with loads of flowers that attracts butterflies. Grows 4" tall and spreads 5-8". Carpet of Snow Alyssum likes full or partial sun. Alyssum can also be grown in containers. **Item No.** FIMGCR 100 Seeds per pack

Alyssum - Royal Carpet

Annual Royal Carpet Alyssum is a versatile edging for borders and has loads of violet blossoms. Grows 3" tall and spreads 10". Royal Carpet Alyssum likes full or partial sun. Alyssum can also be grown in containers. **Item No.** FIMGHB 100 Seeds per pack

Coneflower, Echinacea Purpurea

Perennial Echinacea Purpurea Coneflower is a showy perennial border plant. Echinacea Purpurea Coneflower has lavender mauve daisy blooms with dark centers that are excellent for as cut flowers. Grows 24" to 36" tall and can be grown in full sun or partial

shade. Echinacea Purpurea Coneflower has many medicinal benefits as an herb. **Item No.** FICon 50 Seeds per pack

Russell Lupine

Perennial

Russell Lupine is a perennial flower that grows 12" to 36" tall. A nice combination of solid and bicolor blooms. Russell Lupine likes full sun and blooms from spring to fall. Good choice for cutting.

Item No. FILuRu 100 Seeds per pack

Marigold - Sparky Mix

Annual

These beautiful French marigolds bear lovely 2-3" blossoms, with a mix of yellow, orange, and mahogany red. Plants grow to 10-16". The *Sparky Mix Marigold* sports double blossoms with wide wavy petals, blooms Early Summer until first Fall Frosts. Great for bordering your flower garden or interplanting with your vegetables to ward off pests. You can prune off the foliage

and mix it into your soil to help control nematodes. Interplant with beans to ward off the Mexican Bean Beetle. Easy to grow!

Item No. FIMaSp 100 Seeds per pack

Marigold - Crackerjack Mix

Annual

This is a tall marigold! These distinguished plants grow to 2-3', making these one of the tallest marigolds. Blossoms are large, bright, ball shaped chrysanthemum-like heads, 4" across and sunny yellow, gold, or orange in color. The *Crackerjack Mix Marigolds* are among the earliest marigolds, blooming Early Summer to Late Fall. These African marigolds are ideal for beds, borders, and patio containers. Great in the garden to help ward off bugs, and for nematode control (prune off foliage and mix into soil). Very easy to grow.

Item No. FIMaCj 100 Seeds per pack

Nasturtium - Dwarf Jewel Mix

annual

Dwarf Jewel Mix Nasturtiums are foot tall plants that carry semi double flowers well above the foliage. Dwarf Jewel Mix Nasturtiums bloom freely with brilliant colored blooms. **Item No.** FINaDJM 25 Seeds per pack

Wildflowers, Southern Mix

Annual and Perennial Wild Flowers

Item No. FIWfSM 200 Seeds per pack

Snapdragon - Maximum Mix

Snapdragon Maximum Mix has giant, ruffled blossoms set on a long tapering spike. Maximum Mix plants are 30" tall. Assorted colors. Snapdragon Maximum Mix is an Annual.

Item No. FISdMM 600 Seeds per pack

Sweet Pea - Royal Mix

Lathyrus odoratus Annual

Royal Mix Sweet Pea are very popular, vigorous climbing vines that produce from early summer on. 5-10' vines can be trained to climb a trellis or fence. Small flowers in large clusters of white, rose and pink colors. They like full sun. **Item No.** FISPRM 25 Seeds per pack

Sunflowers

Direct sow seeds after all danger of frost is past and soil has warmed up. Place seeds 1"-1.5" deep, 6-9" apart. After emergence, thin to a 12" to 18" spacing, saving the healthiest plants. Seeds can also be sown indoors and transplanted outdoors for earlier blooms. For fresh cut Sunflowers, cut blooms as soon as they are fully open. For bird food, let heads mature before cutting. Dry heads in the sun or under cover in a dry place. After heads are dry, hang whole head outside for the birds or rub heads over a pail with a frame made with 1/4" hardware cloth. Seeds can also be toasted and eaten.

Autumn Beauty

Annual

Autumn Beauty Sunflowers average 60" tall and have bold beautiful flowers 8" across. Autumn Beauty is a mixture of bright yellow, bronze, and purple shades with some bicolors. Autumn Beauty Sunflower is a multi branching type which produces many long stemmed flowers. **Item No.** FIAuB 50 Seeds per pack

Lemon Queen

Annual

Lemon Queen Sunflower grows 60" tall and is very heat and drought tolerant. Produces up to 10" pale lemon yellow flower by midsummer. To extend the blooming season for Lemon Queen Sunflower, keep cutting the flowers as

they mature. Lemon Queen Sunflower has a strong, wind resistant stalk. Bees and Butterfly's love this Sunflower variety.

Item No. FLeQ 50 Seeds per pack

Mammoth Grey Stripe

Annual

Mammoth Grey Stripe Sunflower grow to 10 feet tall and have a spectacular golden bloom up to 12" across. Seeds

from these giants can be eaten, just crack the shell and eat the heart. Can be roasted too. Mammoth Grey Striped makes excellent bird feed.

Item No. FIMGS 50 Seeds per pack

Incredible (Dwarf)

Annual

Incredible Sunflower is 18" tall and does well in containers. Produces huge 10" yellow flowers.

Item No. FIInc 50 Seeds per pack

Seed Collections

Beginner Garden Seed Collection

The *Beginner Vegetable Garden Seed Collection* helps the new gardener get off to the right start. A garden is a great way to enjoy the outdoors, relieve stress, and get in a little exercise as well. In this vegetable seed collection are easy-to-grow varieties, to help you in relieving your stress; answering the questions "Where do I start?" and "What do I grow?", often difficult choices for the new gardener! SEEDS ARE LIVING ORGANISMS

When you look at a hard dry seed kernel, it is hard to imagine that if you plant it in the soil and nurture it that a real live plant will sprout from it when the right conditions occur. There are many steps involved for this seed to actually sprout and grow. But the real short of it is that when you plant a seed in fertile soil, it absorbs moisture from the soil. This causes the seed to swell and soon a sprout can be seen breaking through the outer shell that becomes the coot. Next will be the stem and so on. During this germination stage It is crucial that the conditions are right. Correct moisture and temperature are very important. Seeds also need oxygen to germinate. After the seed swelling begins, if the moisture should become so depleted that the process has to stop or even just Slow down, the seed will probably die. Or if heavy rains should crust the soil, the germinated seed has only so much push, to break through the crusts. If this does not happen within this seeds time frame, again, the seed will die. As the growing seedling needs photosynthesis from the sun to continue to grow. Without it, it will die. We have only touched on a few very basic steps In the germination of a seed. The curious will research this rather, in their quest to succeed.

100% Certified Organic Seeds

Introducing our newest line of seeds, **100% Certified Organic** garden seeds! These seeds are also, of course, Non-GMO, untreated, non-hybrid, heirloom/open pollinated, just like our usual line of seeds.

You may ask, "Why buy organic seeds?", and there are a few reasons people choose to go with organic seeds. One good reason that makes sense to most gardeners is that seeds coming from organically grown plants will have already been exposed to organic growing conditions and have that extra boost in being likely to thrive in your organic garden. Others just like the peace of mind that their garden is starting out 100% organic, right from the start. Whatever your reason for wanting to buy 100% Certified Organic seeds, we now offer our valued customers this excellent option for their gardens, because, like you, we care about what's going into our gardens, and into our family's diet!

Blue Lake Bush 274 Organic (Phaseolus vulgaris)

54-61 days. This dark green bean is a favorite for canning and freezing, a high quality bean with fine texture.

The *Blue Lake Bush 276 Heirloom Bush Bean's* small 12-22" plants set

forth heavy yields of dark green, round, 5 1/2-6 1/2" pods, over the entire season. This variety originated from the Pole Blue Lake and was developed in 1961. Resistant to BCMV and NY15, widely adapted to varied growing conditions.

Item No. BbBLBOrg 50 Seeds per pack

Contender Organic

(a.k.a. Buff Valentine, Early Contender, Contender Stringless)

(Phaseolus vulgaris)

40-55 days. Earlier than most beans and very productive, this popular variety was introduced in 1949. The *Contender Heirloom Bush Green Bean* is great for cool, short-season climates, but also does well in heat, well adapted to varying growing conditions. Dark green 12-20" plants set forth good yields of med-green 6-8" pods, very flavorful. High in vitamin A, B, and C. Resistant to BCMV, NY15, and GP.

Item No. BbConOrg 50 Seeds per pack

Kentucky Blue Organic

(Phaseolus vulgaris)

51-73 days. An old heirloom variety of pole bean that produces pods 6-8" long, on 6-8' vines. The *Kentucky Blue*

Heirloom Pole Bean comes from a cross of Kentucky Wonder and Blue Lake Pole Beans, bred by Dr. Calvin Lamborn. The round, straight, smooth pods have a distinctive flavor with traces of Blue Lake's sweetness, and are very tender when cooked. The *Kentucky Blue Pole Bean* won the famous *All-American Selections (AAS)* Award in 1991! Disease Resistance: BCMV.

Item No. BpKBOrg
50 Seeds per pack

Detroit Dark Red Organic

(Beta vulgaris)

58 days. The *Detroit Dark Red Beet*, an all-time favorite, has a full, round globe, uni-

formly deep red in color. This beet is known for its sweet flavor, and smooth texture. The tops are dark green and 12" - 15" tall, making good greens. An heirloom variety introduced in 1892. Great for eating fresh, pickling, and canning. **Item No.** BeDDROrg
250 Seeds per pack

Green Sprouting Calabrese Organic (a.k.a. Early Italian Green Sprouting)

(Brassica oleracea)

58-90 days from transplant. This broccoli variety

was brought to America from Italy in the late 1800s. *Green Sprouting Calabrese Broccoli* is a true mainstay with gardeners. Heads grow to 5-8", with a central head, bearing many side shoots. Does well in cool climates, extremely frost tolerant. Will continue to grow side shoots throughout season, even after main head is cut. Very flavorful, and rich in vitamins. **Item No.** BrGSCOrg
50 Seeds per pack

Hales Best Jumbo Organic

(Hale's Best Original, Hales Best Jumbo #936, Hales Jumbo) (Cucumis melo)

85 days. A true favorite that old timers swear by. *Hale's Best Jumbo Melon* is a great early cantaloupe, with very thick sweet flesh, and a small seed cavity, giving you the most melon for your money and your work! The exterior is heavily netted, and the salmon colored interior flesh is rich in flavor. Introduced over 80 years ago this cantaloupe has truly stood the test of time with prolific vines producing large 3-5 lbs. melons. Drought resistant, does well in many growing conditions. **Item No.** ClHBJOrg
25 Seeds per pack

Danvers 126 Organic (a.k.a. Half Long, Danvers Red Core #126)

(Daucus carota)

65-87 days. *Danvers carrots* are conical shaped, with well-defined shoulders, taper-

ing to a point at the tip. They do well in clay or heavy soils, with high yields. The *Danvers 126 Carrot* is heat tolerant. Grows 7-8" long, with large, sturdy tops that aid in harvesting. This variety was developed by the Eastern States Farmers Exchange, West Springfield, Massachusetts from other strains of Danvers which were known for heat resistance. The Danvers 126 has dark bright-orange flesh, which is smooth, sweet, and tender. Stores well. A popular choice for home and market.

Item No. CtDnvrOrg
250 Seeds per pack

Scarlet Nantes Organic (Early Coreless, Scarlet Nantes Coreless) (Daucus carota)

65-68 days. A French heirloom introduced in 1855. The *Scarlet Nantes Carrot* is sweet, juicy, and

nearly coreless. Stout, blunt roots grow to about 4-6", bright red-orange in color, and full of flavor. High in vitamins. A great choice for fresh eating, freezing and juicing. **Item No.** CtScNOrg 250 Seeds per pack

Buttercrunch Organic (a.k.a. Buttercrunch Bibb, Butter King) (Lactuca sativa)

50 - 75 days. Buttercrunch Open Pollinated Butterhead

Lettuce is crisp, tender, sweet, and slow to bolt. Buttercrunch has a larger 4.5" head with the center of the head blanching to a yellow white color.

Item No. LeButOrg
250 Seeds per pack

Romaine Lettuce - Parris White COS Organic (*Ocimum basilicum*)

90 days. Italian Large Leaf Basil is a sweeter pesto type with large medium dark green leaves mostly used for spicing foods. Italian Large Leaf Basil grows 24" to 36" tall.

Item No. HeBILOrg
250 Seeds per pack

**Small Sugar Organic** (*Cucurbita pepo*)

90 days. Small Sugar Open Pollinated Pumpkin is the favorite for pies and canning. Small Sugar has 6 - 8 lbs fruit that has an

orange rind and flesh.

Item No. PuSmSOrg
25 Seeds per pack

**Black Beauty Organic** (*Cucurbita pepo*)

58 days. Black Beauty Open Pollinated Summer Squash Zucchini is the most popular home garden variety. Black Beauty is very productive and there fruits should be pick when

young (About 6" - 8"). Bush Type Plant

Item No. SSBIBOrg 25 Seeds per pack

**Basil - Sweet Italian Large Leaf Organic** (*Ocimum basilicum*)

90 days. Italian Large Leaf Basil is a sweeter pesto type with large medium dark green leaves mostly used for

spicing foods. Italian Large Leaf Basil grows 24" to 36" tall.

Item No. HeBILOrg
50 Seeds per pack

**Champion Organic** (*Raphanus sativus*)

28 days. Champion Open Pollinated Radish has a round scarlet red root that grows to a good size with flesh that is firm,

crisp and white. Champion is excellent for extra early or late sowing's.

Item No. RaChaOrg
250 Seeds per pack

**Oregon Sugar Pod II - Snow Pea Organic** (*Pisum sativum*)

60-68 days. A very productive early variety with short, compact vines that grow to about 28-30". The Oregon Sugar Pod II Snow Pea pro-

duces high yields of smooth, light-green, stringless, broad 4 in. pods, sweet and flavorful. Delicious steamed or fresh. Freezes well, with no loss of color or flavor. Easy to grow, and does not require trellising. Developed by Dr. James Baggett of Oregon State University. Disease Resistance: Fusarium Wilt, Powdery Mildew, and Pea Enation Mosaic Virus, and adding Mildew resistance to the original Oregon Sugar Pod allowing good Fall harvests.

Item No. PeOSPOrg 50 Seeds per pack

Jalapeño, Mid

Organic (a.k.a. Jalapeño M) (*Capsicum annum*)

75 days. A mid-season open-pollinated variety of the most popular hot chile pepper around! The Jalapeño Mid Hot Pepper is very prolific, producing lots of 3-3½" long by 1½" wide bullet-shaped, thick-walled medium-hot chile peppers, very pungent in flavor, but more mild than some of the other jalapeños. Fruits are dark-green, turning to red at maturity, when they reach their greatest heat. Plants grow to 26-36", are dark-green and upright, providing good cover. This is the most popular jalapeño chile pepper variety grown in Mexico. A favorite sliced into rings and sprinkled over nacho's and in homemade salsas and sauces! Great for home gardens, market gardens, and processing. Does well in the North.

Item No. PpJaMORG
25 Seeds per pack

**California Wonder**

300 Organic (a.k.a. California Wonder 300 TMR) (*Capsicum annum*)

73-76 days. A wonderful variety of open-

pollinated sweet bell pepper, producing high yields of heavy, smooth, thick walled peppers. The California Wonder 300 Sweet Bell Peppers reach 4-4½" in length by 3½-4" wide. Fruits are blocky and 4 lobed, turning from a glossy dark green to red at maturity. Excellent at either the green or red stage. Thick crisp flesh has a mild and pleasant flavor. Great raw, with dip, or in salads. Makes a perfect stuffing bell pepper. California Wonder 300 Sweet Bell Peppers are high in Vitamins A and C! This bell pepper does well in cooler climates with shorter growing seasons. Disease Resistance: Tobacco Mosaic Virus. **Item No.** PpCW3Org
25 Seeds per pack

**Amish Paste Organic** (*Lycopersicon lycopersicum*)

70-85 days One of the largest of the paste tomatoes, known for it's wonderful flavor. The Amish Paste Tomato is an heirloom that was discovered among the Amish in Wisconsin, although it originates with the Pennsylvania Amish. With a nice balance of sweet and acid, this tomato is great for eating fresh, canning, and is especially terrific for sauces. These large indeterminate plants produce high yields. The fruits are oxheart, almost teardrop in shape, deep red in color, with thick flesh, and few seeds, weighing approx. 8-12oz. Needs special attention to support as plants tend to be droopy. This is one of our favorite tomatoes, and many we know swear by it to be one of the best paste tomatoes!

Item No. ToAPOrg 25 Seeds per pack

**Bloomsdale Long Standing Organic** (Long Standing, Bloomsdale Savoy Long Standing, Bloomsdale Long Standing Dark Green, American Bloomsdale Extra Long Standing) (*Spinacia oleracea*)

39-60 days An excellent old-time favorite heirloom spinach variety, dependable and delicious, by far the most popular variety on the market! Bloomsdale Long Standing Spinach stands well in hot weather, without bolting (going to seed

prematurely). These vigorous, semi-upright savoyed (crumpled) spinach leaves are dark-green and glossy, with a thick, fleshy texture. High in Vitamins A, B, and C, and a great source of folic acid, iron, magnesium, calcium, potassium, and riboflavin. Bloomsdale Long Standing Spinach is great steamed, boiled, or cooked in your favorite recipe calling for spinach. Makes a great salad by itself with your favorite toppings or add spinach leaves to your favorite salad greens for an extra boost in vitamins and minerals. A great choice for multiple plantings. For first crop, sow in spring. Plant again in late summer. In mild winter areas, fall plantings yield in early spring. **Item No.** SpBLSOrg
200 Seeds per pack

Beefsteak Organic (a.k.a. Scarlet Beefsteak, Red Ponderosa, Crimson Cushion) (*Lycopersicon lycopersicum*)

65-90 days An old-fashioned favorite, popular in gardens for years. The Beefsteak Heirloom Tomato's vigorous, indeterminate vines bear high yields of meaty 10 oz. - 2 lb. tomatoes, somewhat ribbed and rough. These large tomatoes are flattened, solid, and meaty. The juicy, bright red fruits are very flavorful, perfect for slicing, delicious on sandwiches, or in salads. Rich sub-acid flavor harkening to the old-time tomato flavor so sought after by those who remember juicy delicious tomatoes right out of Grandma's garden. Plants need good support. **Item No.** ToBfOrg
25 Seeds per pack

Roma (VF) Organic

(*Lycopersicon lycopersicum*)
70-80 days One of the most well known varieties of tomato, it's popularity has become world-wide. The *Roma Tomato* has been a

favorite of gardeners and cooks alike since it's introduction in 1958. Known for it's fine taste and meaty flesh, this disease resistant variety is most widely sought after for use in sauces and ketchup, as well as salsas. **Determinate** plants set forth loads of pear-shaped 2-3 oz. fruits, with firm flesh and few seeds.

Item No. ToRoOrg
25 Seeds per pack

Yellow Pear Organic

(*Lycopersicon lycopersicum*)
70-80 days This attractive lemon yellow, pear-shaped heirloom dates back to the 17th century. The *Yellow Pear Tomato* is mild and

pleasant, rich in vitamins. These colorful favorites are a perfect addition to pasta salads, and are great sliced, in sauces, or as hors d'oeuvre's. The tall, **indeterminate** vines produce hundreds of firm skinned, 1 1/2" long fruits. They do require caging or staking. Plants are fairly resistant to both heat and cold, bearing longer than other varieties in test gardens. **Item No.** ToYePOrg
25 Seeds per pack

Table Queen Acorn Organic

(a.k.a. Danish, Pepper Squash, Des Moines)
(*Cucurbita pepo*)

75-90 days. A dark green acorn shaped heirloom squash that is descended from a heart shaped

squash grown by the Arikara Indians in the early 1800s. The *Table Queen Acorn Squash* was first introduced by the Iowa Seed Co. in 1913. Deep orange flesh is fine-textured, sweet, dry, and thick. Good for baking, and immature fruit can also be used as a summer squash. Good for storage. Fruits weigh about 1 1/2 lbs, and grow to 4 x 5 1/2 in. **Item No.** SqTQAOrg
25 Seeds per pack

Sugar Baby Organic

(*Citrullus lanatus*)
73 days. Sugar Baby Open Pollinated Watermelon is a small icebox variety that weigh about 6 to 10 lbs. The rind is thin and the flesh is red. Sugar Baby watermelon are a good home garden variety especially in northern areas where longer season melons will not ripen.

Item No. WaSuBOrg
20 Seeds per pack

Waltham Butternut Organic

(*Cucurbita moschata*) 95-110 days. The most popular of the winter squashes. The *Waltham Butternut Squash*

was introduced in 1970 by Bob Young of Waltham Massachusetts and is an *All-American Selections* Award winner. Buff colored rind with fine-textured, sweet orange flesh, that is creamy and rich, with a nutty flavor. Stores very well, lasting sometimes 6 months or even longer. Very resistant to vine borers. Vigorous and dependable. Fruits average 8-9" long, and weigh 3-6 lbs. Great for steaming, boiling, baking, or even harvest young and use as a summer squash. **Item No.** SqWBORG
25 Seeds per pack

Vegetable Spaghetti Organic

(a.k.a. Spaghetti Squash) (*Cucurbita pepo*) 90 days. Introduced by Sakata Seed Co. of Japan, in 1934. May have originated in China. A popular low calorie alternative to pastas. The *Vegetable Spaghetti Squash* produces vigorous spreading vines,

with 5-7 fruits per plant. Fruits have a buff skin, turning pale yellow at maturity, with a pale yellow interior flesh that breaks up into spaghetti like strands when cooked. Squash are 8-12" long, by 5-6" in diameter. Boil whole for 20-30 min, or bake. Use as spaghetti with your favorite sauce, or as a pasta substitute in homemade macaroni and cheese. Or try with butter and salt and pepper. Its taste is nothing like spaghetti, it has a slight sweetness and, if not overcooked, is crunchy and somewhat watery, something like a cucumber. Spaghetti squash contains many nutrients including folic acid, potassium, vitamin A, and beta carotene. **Item No.** SqVeSOrg 25 Seeds per pack

Trowel & Error

Cure plant viruses with spoiled milk. Make a natural and effective insecticide out of fresh basil. Place flat stones under squash or melons to hasten ripening. Recycle an old apple corer as the perfect dibbler for muscari and other small bulbs. Start rosemary cuttings in a green glass bottle. Sprinkle baby powder over seedlings to discourage rabbits. Crush a garlic clove and apply it to your skin as an insect repellent. *Trowel and Error* is a direct line to the kind of practical wisdom that comes only after a lifetime of experience. The book is indexed by problem, plant, pest, and solution, and includes a list of tools and common household items--borax, cornmeal, vinegar--that completes the vegetable gardener's arsenal.

Paperback 336 pages

Worm Castings

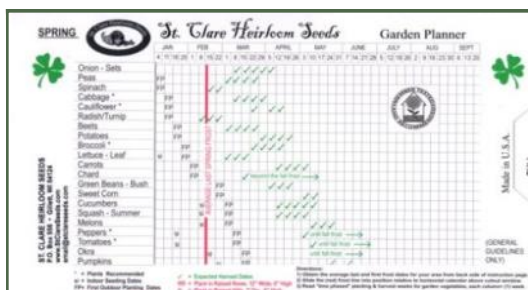

Earthworms are tiny miracle workers, breaking up organic matter and converting it into useful nutrients for your soil. Worm castings are one of the most organic soil enrichments available and are 100% natural, easy to use and safe to handle. In soil, worm castings retain water and release nutrients in a form that is easily used by garden plants. The pH is neutral and therefore suitable for most types of vegetable plants from asparagus to zucchini.

One of the best features of worm castings is you can use as much as you want without the fear of burning tender young plants as other fertilizers are known to do. Unlike other animal manure and artificial fertilizers it is absorbed very easily and almost instantaneously by plants. The amazing thing is, that while the nutrients are easily available they are at the same time naturally endowed with a slow release feature, causing the nutrient benefits to last up to 2 months! This benefit is put in place during the digestion process of the earthworm. As the organic matter passes through the alimentary canal of the worm, a thin layer of oil coats the material, later

eroding over a period of 2 months. The best of both worlds, immediate and long-lasting benefits! Ordinary composts do not have this benefit, they are placed in the garden to enrich the soil and plants, the available nutrients are quickly leached into the soil as soon as rainfall occurs or irrigation systems are turned on. Vermicompost provides a time-released benefit, slowly nurturing the plants over a greater length of time!

Garden Planner

This Garden Planner is a handy, easy-to-use, planning tool for the home and hobby gardener. The chart shows proper **indoor** and **outdoor** planting times relative to average **spring** and **fall** killing frost dates for (22) common garden vegetables, and provides basic planting data. The frost date adjusts, making Clyde's planner useful in most parts of the country, where frost is a critical gardening factor. The "**Time Phased**" format allows the gardener to visualize the sequence of events for planting and harvest activities. Seeding info provided on the slide makes the chart a great shopping aid, and useful planting guide at the garden site. **Item No. CGPlA**

Seed Saving Envelopes

These envelopes are the perfect size for saving your heirloom / open-pollinated garden seeds in for the next year. We have both blank and printed ones and they measure 3-1/4 x 4-5/8 inches. The blank seed saving envelopes do not have a glue strip on the flap so you will need to use some kind of glue or tape to seal the envelope.

Ordering

We only ship Seeds within the United States, U.S. Territories, or U.S. Minor Outlying Islands.

We do not accept orders by mail, all ordering must be done online. This catalog is for reference only and subject to change without notice.

Shipping

All Seed and Book Orders

USPS 1st Class Mail - \$5.00

USPS Priority Mail - \$10.00

UPS Ground - \$11.00

***Note:** We ship all seed orders USPS 1st class mail and books are shipped separately by media mail. If you place an order with seeds and books the shipping is still **just \$5.00 for the entire order**, the items are just shipped separately. This really helps to keep our shipping rates low, passing on the savings to you our valued customers.

Worm Castings

The shipping costs for the Worm Castings are included in the price of each size box and they are shipped Priority mail. We looked at various ways to ship our worm castings and keep the cost low on the customer's end and this was the cheapest. We are confident that you will still find our prices to be a great deal if you look around; that is our aim to give you great prices, quality products, and the best in service!

Contact Us

As we are a small family business, we are unable to staff the phone. Depending on time of year, and time of day we are busy filling orders, doing office work, working the gardens and fields, cleaning and checking seed, etc. To be able to keep our product prices reasonable, we do all this work ourselves, keeping us from having to hire help. We appreciate your understanding of this, and are happy to reply when you send us an email.

If you have any questions or comments please feel free to email us at email@stclareseeds.com **Note: If you have written us recently and have not heard back from us please check your spam folder.** We love hearing from you, and strive to get backing to each customer promptly, please drop us a line today, and let us know how we're doing serving you!
